From the shores of Alaska to the marshes of Louisiana, from the Mississippi to the Great Lakes, America's waters provide food, drinking water and protection from storms and flooding. Businesses small and large depend on healthy waters to employ millions of fishermen, tourism workers, food processors and others. But these great waters and the jobs and services they provide are threatened by the impacts of climate change. To protect our water resources and their economic vitality, Congress must pass comprehensive climate and energy legislation that caps carbon pollution and provides dedicated funding to reduce the risks to nature and people.

**Let's get the *whole* job done for people and America's great waters.**

**SUPPORT COMPREHENSIVE CLIMATE AND ENERGY LEGISLATION  
THAT DEDICATES 5% OF TOTAL ALLOWANCE VALUE  
FOR SAFEGUARDING NATURAL RESOURCES.**

From Yosemite's Half Dome to the coastal wildlife refuges of the Eastern seaboard, from the national forests of New England to the iconic landscapes of the Rocky Mountain West, America's 635 million acres of public lands provide clean air, pure water, havens for wildlife, and jobs and recreation opportunities in all 50 states. These lands are critical to local economies, especially in rural America. But our national parks, wildlife refuges and forests—and the jobs and services they provide—are threatened by global warming. To protect our communities and treasured wild lands, Congress must pass comprehensive climate and energy legislation that reduces carbon pollution and provides dedicated funding to safeguard our natural resources.

# LET'S GET THE **WHOLE** JOB DONE.

Over the last 15 years, sportsmen and women have invested over \$1 trillion in our environment and local communities. Our investment has restored and conserved the places we hunt and fish. Our investment has supported the people, jobs, towns and businesses that are part of America's \$76 billion annual hunting and fishing industry. We need to protect our investment from a changing climate that is threatening wildlife habitat and our hunting and fishing heritage. To protect our outdoor traditions and their economic value, Congress must pass comprehensive climate and energy legislation that reduces emissions and provides dedicated funding to safeguard wildlife and natural resources from climate impacts. Our investment is worth protecting.

**Let's get the *whole* job done for America's hunting and angling communities.**

Healthy natural resources contribute billions of dollars to our economy every year. Camping, hiking, bird watching, skiing, mountain biking, fishing and other outdoor activities that rely on healthy wildlife and ecosystems contribute \$730 billion to the U.S. economy. They also support nearly 6.5 million jobs and generate \$88 billion in state and national tax revenue. To protect wildlife and nature—and the important role they play in our economy—Congress must pass comprehensive climate and energy legislation that reduces carbon pollution and safeguards our communities, wildlife and natural resources from climate change impacts. When we invest in ways to protect nature and wildlife, we are not only helping nature, we are helping ourselves.

Safeguarding natural resources from climate change impacts also helps to protect America's job market. One out of every 20 jobs in the U.S. today is nature-related, and tens of thousands of new jobs could be created right away for workers to restore wetlands, plant trees, remove invasive species, control erosion, monitor forests and provide the science and planning to address the threats of global warming. To protect wildlife and natural resources—and the important role they play in keeping America employed—Congress must pass comprehensive climate and energy legislation that reduces carbon pollution and provides dedicated funding to safeguard natural resources while investing in America's workforce.
