

UNITED STATES DISTRICT COURT  
EASTERN DISTRICT OF CALIFORNIA

-----oo0oo-----

HOME BUILDERS ASSOCIATION OF  
NORTHERN CALIFORNIA, BUILDING  
INDUSTRY LEGAL DEFENSE  
FOUNDATION, CALIFORNIA  
BUILDING INDUSTRY ASSOCIATION,  
CALIFORNIA STATE GRANGE, and  
GREENHORN GRANGE,

NO. CIV. S-05-0629 WBS-GGH

Plaintiffs,

and

CITY OF SUISUN,

MEMORANDUM AND ORDER

Plaintiff-Intervenor,

and

TSAKOPOULOS INVESTMENTS,  
TSAKOPOULOS FAMILY TRUST,  
DROSOULA TSAKOPOULOS, and  
GEORGE TSAKOPOULOS,

Plaintiff-Intervenors,

v.

UNITED STATES FISH AND  
WILDLIFE SERVICE; H. DALE  
HALL, Director of the United  
States Fish and Wildlife  
Service; UNITED STATES  
DEPARTMENT OF INTERIOR; and  
GALE A. NORTON, Secretary of  
the United States Department

of Interior,

1                   Defendants,

2 and

3 DEFENDERS OF WILDLIFE, BUTTE  
4 ENVIRONMENTAL COUNCIL, AND  
5 CALIFORNIA NATIVE PLANT  
SOCIETY,

6                   Defendant-Intervenors.

7 BUTTE ENVIRONMENTAL COUNCIL,  
8 DEFENDERS OF WILDLIFE,  
9 CALIFORNIA NATIVE PLANT  
SOCIETY, SAN JOAQUIN RAPTOR AND  
10 WILDLIFE RESCUE CENTER, SIERRA  
FOOTHILLS AUDUBON SOCIETY, and  
11 VERNALPOOLS.ORG,

12                   Plaintiffs,

13                   v.

14 GALE A. NORTON, Secretary of  
the Interior, and U.S. FISH  
15 AND WILDLIFE SERVICE,

16                   Defendants.

---

17  
18                   -----oo0oo-----

19                   Plaintiffs brought this action pursuant to the  
20 Endangered Species Act ("ESA"), 16 U.S.C. §§ 1531 et seq.; the  
21 National Environmental Policy Act ("NEPA"), 42 U.S.C. §§ 4321 et  
seq.; and the Administrative Procedure Act ("APA"), 5 U.S.C. §§  
22 701 et seq. Plaintiffs challenge the United States Fish and  
23 Wildlife Service's (hereafter "FWS") critical habitat designation  
24 of over 800,000 acres of land in California and Oregon for  
25 fifteen vernal pool species. Currently pending before the court  
26 are five cross-motions for summary judgment filed by plaintiffs,  
27 Home Builders Association of Northern California, et al. ("Home  
28

1 Builders"); plaintiffs and defendant-intervenors, Butte  
 2 Environmental Council, et al. ("Environmental Groups");  
 3 plaintiff-intervenor, the City of Suisun ("Suisun"); plaintiff-  
 4 intervenors Tsakopoulos Investments, et al. ("Tsakopoulos  
 5 Investments"); and defendants, the United States Fish and  
 6 Wildlife Service, H. Dale Hall, and Gale A. Norton ("Federal  
 7 Defendants"). Defendant-intervenor, Placer Ranch, Inc. ("Placer  
 8 Ranch") filed an opposition to the Environmental Group's motion  
 9 for summary judgment. Also pending before the court is a motion  
 10 to strike filed by the Federal Defendants.

11 I. Factual and Procedural History

12 Beginning in 1978 and continuing through 1997, pursuant  
 13 to the Endangered Species Act, the FWS listed as endangered  
 14 fifteen species of plants and animals that live in vernal pool  
 15 environments.<sup>1</sup> See 43 Fed. Reg. 44,810 (Sept. 28, 1978); 57 Fed.  
 16 Reg. 24,192 (June 8, 1992); 59 Fed. Reg. 48,136 (Sept. 19, 1994);  
 17 62 Fed. Reg. 14,338 (Mar. 26, 1997); 62 Fed. Reg. 33,029 (June  
 18, 1997). The fifteen species are four crustaceans (the  
 19 Conservancy fairy shrimp, the longhorn fairy shrimp, the vernal  
 20 pool fairy shrimp, and the vernal pool tadpole shrimp), and  
 21 eleven plants (the Butte County meadowfoam, Contra Costa  
 22 goldfields, Hoover's spurge, succulent or fleshy owl's clover,  
 23 Colusa grass, Greene's tectoria, hairy Orcutt grass, Sacramento

24  
 25 <sup>1</sup> In enacting 16 U.S.C. § 1533 of the Endangered Species  
 26 Act, Congress directed that the Secretary of Commerce shall  
 27 determine whether species are threatened or endangered species,  
 28 and inform the Secretary of the Interior of such determinations.  
 In turn, the Secretary of Interior shall list species that are  
 threatened or endangered and "designate any habitat of such  
 species which is then considered to be critical habitat." 16  
 U.S.C. § 1533.

1 Orcutt grass, San Joaquin Valley Orcutt grass, slender Orcutt  
2 grass, and Solano grass). 67 Fed. Reg. 59,884 (Sept. 24, 2002).  
3 These fifteen species are distributed in vernal pool complexes  
4 located throughout southern Oregon, parts of California, and  
5 parts of northern Mexico. 70 Fed. Reg. 46,925 (Aug. 11, 2005).

6       A. The Vernal Pool Habitat

7           The vernal pool ecosystem in which these species are  
8 found is a unique form of wetland that is rendered distinctive by  
9 its temporary existence. 67 Fed. Reg. at 59,884. Vernal pools  
10 typically form when precipitation pools above a soil layer that  
11 is virtually impermeable to water. Id. at 59,885. The pools  
12 usually occur in complexes, or clusters, that are fed with water  
13 by "low drainage pathways" called swales. Id. They are  
14 generally found in Mediterranean climates that have dry seasons  
15 when evaporation exceeds rainfall, and wet seasons with mild  
16 temperatures, during which animals and plants reach maturity and  
17 reproduce. Id. Vernal pools cycle through four different  
18 phases: the wetting phase, when the soil becomes saturated; the  
19 aquatic phase, when the pool is filled with water; the water-  
20 logged drying phase, when the water begins to evaporate and seep  
21 into the surrounding soil, keeping the soil moist; and the dry  
22 phase, when the pool has disappeared and the soil becomes  
23 completely dry. Id. Because the existence of a pool is  
24 dependent on rainfall, there are years when vernal pools fill to  
25 a lesser or greater extent, and years when they do not fill at  
26 all. Id. This feature of the ecosystem effectively excludes  
27 fish and other predators, and allows species that can survive  
28 during the dry phase to flourish in their absence. Id. at

1 59,884.

2       Many of the nutrients on which the vernal pools depend  
3 come from detritus, organic matter that washes into the pools  
4 through the swales from nearby uplands. 70 Fed. Reg. at 46,925.  
5 The four crustacean species consume detritus as one of their  
6 primary sources of food. Id. The crustacean species inhabiting  
7 vernal pools have also adapted to the dry phase of their  
8 environment by developing a dormant stage. Id. at 59,887. After  
9 being fertilized, the eggs develop a thick shell with many  
10 layers. Id. At a late stage of embryonic development, the  
11 embryo stops growing and its metabolism slows dramatically, and  
12 the egg becomes known as a "cyst." Id. In its desiccated state,  
13 a cyst can remain viable for many years and is able to withstand  
14 fire, freezing, temperatures near boiling, oxygen deprivation,  
15 and exposure to enzymes inside another animal's digestive tract.  
16 Id. It is not clear what signals the cysts to hatch, but not all  
17 dormant cysts will hatch in a given season--some cysts will  
18 remain dormant, thus protecting against complete reproductive  
19 failure if the vernal pool dries up prematurely. Id. at 59,887.

20       Vernal pool plants are similarly well-adapted to the  
21 vernal pool environment. They are annuals, which means that they  
22 germinate, grow, and propagate in the span of a year. Id. at  
23 59,889. Much like the cysts of the vernal pool crustaceans,  
24 vernal pool plants produce seeds that may remain dormant, but  
25 still viable, for many years; additionally, there is a "seed  
26 bank" of dormant seeds continuously maintained to ensure survival  
27 in the event that the aquatic stage of the pool ends prematurely.  
28 Id. Vernal pool plants are able to resist invasion by non-native

1 plants because of the severe conditions ensure that native plants  
2 are uniquely able to survive. Id. at 59,885.

3           The physical, geographic, and biological  
4 characteristics of vernal pools are somewhat varied, and for this  
5 reason, scientists have developed different classifications for  
6 vernal pools based on the nature of the underlying soil layer  
7 that traps the water and enables the pools to form. Id. at  
8 59,886 (citation omitted). Vernal pool habitats are jeopardized  
9 by urban development, encroachment upon the water supply,  
10 activities to control flooding, and the conversion of land to  
11 agricultural use. Id. at 59,889.

12           B. The Critical Habitat Designation

13           In September, 1994, when the FWS listed four species of  
14 fairy shrimp as endangered, it determined that critical habitat  
15 designation for the fairy shrimp was "not prudent" because "such  
16 designation likely would increase the degree of threat from  
17 vandalism or other human activities." 59 Fed. Reg. at 48,151.  
18 In February, 2001, this court joined other courts' findings in  
19 determining that the FWS' deviation from its statutory mandate to  
20 designate critical habitat, concurrently with the listing of a  
21 species as endangered, violated the APA. Butte Env'tl. Council v.  
22 White, 145 F. Supp. 2d 1180, 1185 (E.D. Cal. 2001). At that  
23 time, this court ordered the defendants to designate critical  
24 habitat for the Conservancy fairy shrimp, longhorn fairy shrimp,  
25 vernal pool fairy shrimp, and the vernal pool tadpole shrimp, and  
26 publish its final designation by August 15, 2001. Id. However,  
27 on July 23, 2001, the parties stipulated to a one-year extension  
28 for the critical habitat designation and the additional

1 designation of critical habitat for eleven vernal pool plant  
2 species. Butte Env'tl. Council v. Norton, slip op., 04-0096, at 3  
3 (N.D. Cal. Oct. 28, 2004). The FWS did not comply with this  
4 deadline. Id.

5 The FWS published a proposed rule to designate  
6 1,662,762 acres of critical habitat for the fifteen vernal pool  
7 species on September 24, 2002. 67 Fed. Reg. 59,884. The  
8 proposed rule excluded land from the critical habitat designation  
9 if the economic benefits of exclusion were found to outweigh the  
10 economic benefits of inclusion, if areas were already under the  
11 supervision of the state (e.g., areas within National Wildlife  
12 Refuges), or if the lands belonged to the Department of Defense  
13 or a Native American tribe. 68 Fed. Reg. at 46,746-54.

14 Pursuant to a settlement agreement, the FWS was to  
15 issue a critical habitat designation by July, 2003. The FWS  
16 issued an "initial" final critical habitat designation on August  
17 6, 2003, that diminished the amount of critical habitat by more  
18 than one million acres. 68 Fed. Reg. 46,684; see Butte Env'tl.  
19 Council, No. 04-0096 at 4. In January, 2004, Environmental  
20 Groups challenged these exclusions from the critical habitat  
21 designation in this court. Butte Env'tl. Council, No. 04-0096, at  
22 4. The court remanded for reconsideration, but did not set aside  
23 the critical habitat designation in the interim. Id. Instead,  
24 the court required that the FWS "reconsider the exclusions from  
25 the final designation of critical habitat for the 15 vernal pool  
26 species, with the exception of those lands within the five  
27 California counties that were excluded based on potential  
28 economic impacts, and publish a new final determination as to

1 those lands within 120 days." Id. Additionally, the FWS was to  
2 "reconsider the exclusion of the five California counties based  
3 on potential economic impacts and publish a new final  
4 determination no later than July 31, 2005." Id.

5 On December 28, 2004, the FWS published notice that it  
6 would reopen the comment period and solicit public comment on the  
7 economic and non-economic exclusions of land made in the proposed  
8 rule published on September 24, 2002. 69 Fed. Reg. 77,700,  
9 77,702-03 (Dec. 28, 2004). This comment period occurred in two  
10 parts--the FWS accepted comments on the non-economic exclusions  
11 and on the fifteen vernal pool species first, and then on the  
12 economic exclusions. Id. at 77,700. On March 8, 2005, the FWS  
13 confirmed its non-economic exclusion determinations in the  
14 August, 2003, final rule. 70 Fed. Reg. 11,140 (Mar. 8, 2005).  
15 On June 30, 2005, the FWS published notice of a consulting firm's  
16 economic analysis of the critical habitat designation proposed in  
17 2002, which concluded that the designation would cost \$992  
18 million over the next twenty years. 70 Fed. Reg. at 37,739. The  
19 consulting firm also ranked the census tracts based on the  
20 opportunity costs that would result if they were designated as  
21 critical habitat. 70 Fed. Reg. at 37,740.

22 In its June 30 notice, the FWS noted that it was  
23 contemplating the exclusion of either 20, 35, or 50 of the census  
24 tracts that would suffer the greatest economic impact. 70 Fed.  
25 Reg. at 37,740. Accordingly, the FWS solicited additional  
26 comments on this economic analysis for twenty days. Id. at  
27 37,741. The comment period was abbreviated to ensure compliance  
28 with the July 31, 2005, deadline set by this court for a final

1 designation. Id.

2 On August 11, 2005, the FWS published its final rule  
3 designating approximately 858,846 acres of critical habitat in 34  
4 California counties and one county in southern Oregon. 70 Fed.  
5 Reg. 46,924 (Aug. 11, 2005). This final rule excluded the 20  
6 census tracts that would suffer the greatest economic impact,  
7 along with three for which the economic benefits of exclusion  
8 outweighed the benefits of inclusion. Id. at 46,931-32, 46,948-  
9 52. On February 10, 2006, the FWS published an administrative  
10 rule that more specifically indicated the species-specific unit  
11 descriptions and maps for the protected species. 71 Fed. Reg.  
12 7,119 (Feb. 10, 2006).

13 II. Discussion

14 \_\_\_\_\_ In their cross-motion for summary judgment, the Federal  
15 Defendants argue that the court is divested of jurisdiction over  
16 certain claims brought by Home Builders, Tsakopoulos Investments,  
17 and Suisun because of a failure to give 60-days notice to the  
18 agency of their respective claims. The Environmental Groups echo  
19 these arguments with respect to certain claims brought by  
20 plaintiffs Home Builders. The court will address these arguments  
21 first, as it must entertain jurisdictional matters before all  
22 others. Kerr-McGee Chem. Corp. v. U.S. Dep't of Interior, 709  
23 F.2d 597, 600 (9th Cir. 1983).

24 \_\_\_\_\_ A. Jurisdiction

25 1. Notice Requirement under the ESA

26 The Endangered Species Act (ESA) authorizes citizen  
27 suits under 16 U.S.C. §§ 1531-44. The section that is relevant  
28 here, 1540(g)(2)(A)(i), authorizes citizen suits with the

1 following limitation: "No action may be commenced under  
 2 subparagraph (1) (A) of this section . . . prior to sixty days  
 3 after written notice of the violation has been given to the  
 4 Secretary, and to any alleged violator of any such provision or  
 5 regulation . . . ." Compliance with this provision of the ESA is  
 6 a jurisdictional prerequisite to filing suit. Sw. Ctr. for  
7 Biological Diversity v. U.S. Bureau of Reclamation, 143 F.3d 515,  
8 520 (9th Cir. 1998). "A failure to strictly comply with the  
9 notice requirement acts as an absolute bar to bringing suit under  
10 the ESA." Id. (citing Hallstrom v. Tillamook County, 493 U.S.  
11 20, 26-28 (1989); Lone Rock Timber Co. v. U.S. Dept. of Interior,  
12 842 F. Supp. 433, 440 (D. Or. 1994)) (emphasis added).  
13 Accordingly, "[t]he citizen suit notice requirements cannot be  
14 avoided by employing a 'flexible or pragmatic construction.'"  
15 Kern County Farm Bureau v. Badgley, No. 02-5376, 2002 U.S. Dist.  
16 LEXIS 24125, at \*20 (E.D. Cal. Oct. 10, 2002) (quoting Hallstrom,  
17 493 U.S. at 26).

18           Although claims against the Secretary that do not fall  
 19 within the scope of the ESA may be brought under the APA, 5  
 20 U.S.C. § 704, this section "authorizes review only when 'there is  
 21 no other adequate remedy in a court.'" Bennett v. Spear, 520  
 22 U.S. 154, 173-74, 161-162 (quoting 5 U.S.C § 704). Thus, if a  
 23 claim falls within the scope of the citizen-suit provision, that  
 24 is, if it alleges violations of § 1533, the APA is unavailable  
 25 and cannot be used to circumvent the ESA's notice requirements.  
 26 See Hawaii County Green Party v. Clinton, 124 F. Supp. 2d 1173,  
 27 1193 (D. Hawaii 2000) ("Although the APA does not contain the 60  
 28 day notice provision, a plaintiff cannot claim that the suit

1 falls under the APA in order to avoid the notice requirement . .  
2 . . . A rule that allowed a plaintiff to choose between bringing a  
3 claim under the APA or the ESA would allow plaintiffs to  
4 circumvent the 60 day notice requirements of the ESA.").

5           2. Plaintiffs Home Builders

6           The Federal Defendants contend that the court lacks  
7 jurisdiction over Home Builders' fifth and sixth causes of action  
8 because they failed to give 60 days' notice to the Secretary  
9 about the substance of those claims. The Environmental Groups  
10 make the same argument with regard to claims one, two, and three.

11           In November and December, 2004, plaintiffs Home  
12 Builders sent Federal Defendants notice of their intent to  
13 challenge the August, 2003 Final Rule. (Doc. # 31, Ex. 1 & 2  
14 (Home Builders' Notice to FWS).) Home Builders listed six legal  
15 challenges, including two challenges that are relevant here--  
16 namely, that Federal Defendants failed to conduct the required  
17 exclusion analysis in violation of § 1533(b)(2) and failed to  
18 adequately evaluate the economic impact of designating critical  
19 habitat, also in violation of § 1533(b)(2). (See id., Ex. 1 at  
20 6.) Subsequently, Federal Defendants reopened the public comment  
21 period with respect to the economic analysis and the exclusions  
22 in the August, 2003 Final Rule, prompted by an order from this  
23 court. In August, 2005, Federal Defendants published the 2005  
24 Final Rule designating critical habitat.

25           Upon review of the record, it is apparent that the 2005  
26 Final Rule is a hybrid of new analysis and previous analysis  
27 taken from the 2003 Rule. The record reflects that the 2003 Rule  
28 was adapted and revised after the Federal Defendants reexamined

1 the exclusions and economic impact. See 70 Fed. Reg. 46,924  
 2 (Aug. 11, 2005) ("We, the [FWS], have re-evaluated the economic  
 3 analysis made in our previous final rule . . . ."); 70 Fed. Reg.  
 4 11,140 (Mar. 8, 2005) ("We, the [FWS], confirm the non-economic  
 5 exclusions made to our previous final rule . . . .").

6 For the reasons discussed below, the court concludes  
 7 that Home Builders' notice was sufficient. Home Builders' notice  
 8 specifically alleged that Federal Defendants failed to make  
 9 proper exclusions and failed to appropriately analyze the  
 10 economic impact of the designation. Home Builders subsequently  
 11 filed suit alleging a claim for failure to adequately evaluate  
 12 economic impacts of the critical habitat designation (claim five)  
 13 and a claim for failure to properly conduct the mandatory  
 14 exclusion analysis (claim six). (See Pls. Home Builders' First  
 15 Am. Compl. ¶ 13.) A simple comparison between the allegations in  
 16 the notice and the allegations in the complaint reveal that the  
 17 Federal Defendants had notice of Home Builders' intentions.<sup>2</sup>

18 As discussed previously, the purpose of the notice  
 19 requirement is to give the federal government an opportunity to  
 20 comply with the allegations, thereby rendering a citizen suit  
 21 unnecessary. Marbled Murrelet v. Babbitt, 83 F.3d 1068, 1072  
 22 (9th Cir. 1996). Implicit in the notice provision is that,  
 23 should the Federal agency not comply or rectify the violation,  
 24 the citizen will bring suit. That is exactly what happened here:

---

25       <sup>2</sup> Although Home Builders' sixth claim for relief alleges  
 26 that Federal Defendants improperly limited their exclusion  
 27 analysis to twenty-three of the most affected census tracts,  
 28 which plaintiffs admit was not expressly noticed, plaintiffs'  
 noticed arguments regarding the FWS' approach to cost-benefit  
 analysis apply with equal force to this claim.

1 Federal Defendants failed to rectify the alleged violations in a  
2 manner satisfactory to Home Builders. It does not follow,  
3 however, that Home Builders must now file a new notice of intent  
4 to sue.

5 For the purposes of the notice requirement, it is  
6 sufficient that Home Builders gave Federal Defendants notice of  
7 the issues they would pursue in litigation and subsequently filed  
8 suit on those exact issues. There is certainly no statutory  
9 language in the ESA citizen-suit provisions that requires a  
10 citizen to renew their notice each and every time the FWS  
11 reevaluates its previous rule. In Marbled Murrelet, plaintiff  
12 filed a notice that did not clearly delineate which section of  
13 the ESA the defendant allegedly violated. The court determined  
14 that although the relevant section of the statute was "referenced  
15 in only one part of the letter, the letter as a whole provided  
16 notice sufficient to afford the opportunity to rectify the  
17 asserted ESA violations[, and t]his was sufficient to satisfy the  
18 jurisdictional requirement of notice." Id. at 1074.  
19 Additionally, in relation to the Clean Water Act, which has a 60-  
20 day notice provision that is similar to the ESA, the Ninth  
21 Circuit has held that a notice given before the rule it  
22 challenged was amended, which substantially provided the agency  
23 with the requisite notice, did not need to be re-filed. Natural  
24 Resources Def. Council v. Sw. Marine, Inc., 236 F.3d 985, 996  
25 (9th Cir. 2000).

26 Similarly, Home Builders' letter to Federal Defendants  
27 "as a whole provided notice sufficient to afford" Federal  
28 Defendants the opportunity to rectify the violations. The fact

1 that Federal Defendants attempted to respond to the allegations  
 2 to some degree does not mean that Home Builders must refile a  
 3 notice to sue. See Water Keeper Alliance v. U.S. Dept. of  
4 Defense, 152 F. Supp. 2d 163, 174 (1st Cir. 2001) (concluding  
 5 that an environmental group's notice of intent to sue Department  
 6 of Defense under the ESA regarding a biological opinion was  
 7 adequate notice, even where a new biological assessment was  
 8 issued in the interim--the notice made clear that group intended  
 9 to challenge an ongoing delinquency in the preparation of a  
 10 biological assessment).

11 Southwest Center for Biological Diversity v. U.S.  
 12 Bureau of Reclamation, on which Federal Defendants rely, is  
 13 distinguishable. 143 F.3d 515, 521 (9th Cir. 1998). There, the  
 14 court concluded that none of plaintiff's notice letters informed  
 15 the Service that plaintiff had a grievance about the specific  
 16 habitat at issue in the litigation. The court found that, as a  
 17 result of this deficiency, "neither party was able to resolve  
 18 that particular grievance in the litigation-free window provided  
 19 for under the ESA notice provision." Id. The court explained  
 20 that the plaintiff "was obligated to provide sufficient  
 21 information of a violation so that the [FWS] could identify and  
 22 attempt to abate the violation." Id.

23 Likewise, Moden v. U.S. Fish & Wildlife Service does  
 24 not support Federal Defendants' contention that Home Builders did  
 25 not provide defendants with sufficient notice. 281 F.  
 26 Supp. 2d 1193, 1206 (D. Or. 2003). In Moden, the plaintiffs'  
 27 initial notice charged the agency with a duty to remove certain  
 28 endangered species from the list. Id. at 1205. However, the

1 agency had not considered, let alone rejected, the petition to  
 2 delist the species, so the plaintiffs' notice that it would sue  
 3 the agency for committing an unlawful action was premature. Id.  
 4 at 1206. Finally, Federal Defendants cite a decision by Judge  
 5 Ishii that is expressly distinguishable from this case. In Kern  
 6 County Farm Bureau v. Badgley, the plaintiff filed notice of its  
 7 intent to sue the agency for a final rule regarding the listing  
 8 of an endangered species before the agency's final rule issued.  
 9 No. 02-5376, 2002 U.S. Dist. LEXIS 24125, at \*35-36 (E.D. Cal.  
 10 Oct. 10, 2002). Distinguishing Natural Resources Defense  
 11 Council, Judge Ishii indicated that "[t]his is not a case in  
 12 which the Secretary submitted two final rules--one before the  
 13 notice letter was sent and one afterwards." Id. at \*36.

14 Here, Home Builders filed its notice with regard to a  
 15 final rule promulgated by the agency, and the final rule was  
 16 amended after the notice was filed. Home Builders' notice  
 17 clearly informed the Federal Defendants of the very allegations  
 18 Home Builders planned to raise, and subsequently did raise, in  
 19 the instant litigation. The fact that the parties' use of the  
 20 "litigation-free" window failed to resolve Home Builders  
 21 allegations does not render Home Builders' notice moot. Rather,  
 22 it merely signifies that the parties failed to reach an agreement  
 23 to resolve the dispute. For these reasons, the court concludes  
 24 that Home Builders complied with the notice requirement, and this  
 25 court therefore has jurisdiction over the claims in their  
 26 complaint.

27           3. Plaintiff-Intervenors Tsakopoulos Investments

28           The Federal Defendants further argue that Tsakopoulos

1 Investments did not provide the FWS with notice of its claims 60  
 2 days before bringing suit, as required under the ESA.  
 3 Tsakopoulos Investments sent notice to the FWS on March 6, 2006.  
 4 (Kate O'Leary Decl. Ex. 4 (Formal Petition to the FWS) (Doc.  
 5 #68).) Tsakopoulos Investments filed suit and moved to intervene  
 6 in the case on March 14, 2006, only eight days after providing  
 7 the Secretary with notice. Tsakopoulos Invs. v. Allen, slip op.,  
 8 No. 06-542 (E.D. Cal. Mar. 14, 2006); (Mar. 14, 2006 Mot. to  
 9 Intervene as Pls.).

10 Tsakopoulos Investments maintains that its claims were  
 11 brought pursuant to the APA and not the ESA because the "ESA does  
 12 not provide a cause of action in situations like this, where the  
 13 Fish and Wildlife Service has executed its mandatory duty to  
 14 designate critical habitat, but has done so in an arbitrary and  
 15 capricious manner." (Tsakopoulos' Reply 3:12-25.) In making  
 16 this argument, Tsakopoulos Investments incorrectly contends that  
 17 it can avoid the ESA's notice requirement by manipulating the  
 18 nature of claims that arise under the ESA. See Hawaii County  
 19 Green Party, 124 F. Supp. 2d at 1193 (D. Hawaii 2000) (concluding  
 20 that "a particular claim may only be brought under either the APA  
 21 or the ESA--a plaintiff may not chose her statutory weapon").

22 Tsakopoulos Investments further misconstrues what  
 23 constitutes a "non-discretionary decision." Contrary to  
 24 Tsakopoulos Investments' contentions, the terms of § 1533 are  
 25 "plainly those of obligation rather than discretion." Assoc. of  
 26 Cal. Water Agencies ("ACWA") v. Evans, 386 F.3d 879, 883 (9th  
 27 Cir. 2004). Among other things, the statute states that the  
 28 "Secretary shall designate critical habitat . . . on the basis of

1 the best scientific data available and after taking into  
2 consideration the economic impact. . . ." § 1533(b)(2) (emphasis  
3 added). In other words, § 1533 sets out required considerations  
4 for the determination of critical habitat and the section is  
5 crafted in mandatory language.

6         In Bennett v. Spear, the Supreme Court confirmed that  
7 the citizen suit provisions of the ESA apply to allegations that  
8 the Service ignored requisite considerations set forth by § 1533.  
9 520 U.S. at 171-72. As in this case, the plaintiffs in Bennett  
10 challenged an FWS decision on the basis that defendants had  
11 failed to take into account the possible economic impact of the  
12 decision, as specifically required by § 1533. In Bennett, the  
13 government argued that the citizen suit provision did not apply  
14 to the failure to consider economic impact. The court rejected  
15 that argument and confirmed that § 1533 sets forth mandatory,  
16 non-discretionary requirements, that terms stating that the  
17 Secretary "shall" take specific action "are plainly those of  
18 obligation rather than discretion," and that claims alleging  
19 failure to comply with such a mandate come within §  
20 1540(g)(1)(C). Id.

21         Similarly, plaintiffs' allegations here invoke the  
22 requirements of § 1533. Indeed, a plain reading of Tsakopoulos  
23 Investments' complaint reveals allegations of the Federal  
24 Defendants' failure to take specific actions that are "plainly  
25 those of obligation rather than discretion." Id. As the Federal  
26 Defendants point out, Tsakopoulos Investments' third cause of  
27 action is almost identical to the issue presented in ACWA, in  
28 which the Ninth Circuit concluded that the claim fell squarely

1 within the scope of the citizen suit provision. 386 F.3d at 884.  
2 The Ninth Circuit concluded that the failure to conduct an  
3 economic review pursuant to § 1533 (b) (2) was a claim governed by  
4 the citizen suit provision of the ESA. See id. Tsakopoulos  
5 Investments' third cause of action alleges that Federal  
6 Defendants violated the ESA by failing to adequately evaluate the  
7 economic impact of designating critical habitat in violation of §  
8 1533(b) (2). Thus, like the plaintiffs in ACWA, Tsakopoulos  
9 Investments' third claim seeks to enforce mandatory duties  
10 imposed by the ESA, and this claim is therefore subject to the  
11 notice requirement.

12 The remainder of the claims in Tsakopoulos Investments'  
13 complaint similarly refer to mandatory duties that the FWS must  
14 perform under the ESA. Tsakopoulos Investments' first claim  
15 alleges that the Federal Defendants failed to adequately identify  
16 physical or biological features essential to conservation, as  
17 required by the ESA; the second claim also alleges that the  
18 Federal Defendants failed to identify the geographic areas  
19 identified by the species, as required by the ESA; the third  
20 claim is for the failure to comply with the ESA's direction that  
21 "the Secretary shall designate critical habitat . . . after  
22 taking into consideration the economic impact, the impact on  
23 national security, and any other relevant impact;" the fourth  
24 claim relates to the FWS' failure to consider the best available  
25 scientific and commercial data as required by the ESA; the fifth  
26 claim relates to the failure to conduct the mandatory exclusion  
27 analysis; and the sixth and seventh claims allege that the FWS  
28 failed to adequately comply with the notice and comment

1 requirement as required by the APA and the ESA.<sup>3</sup> (Id.) Thus,  
 2 the court concludes that the notice requirement applies to the  
 3 claims in Tsakopoulos Investments' complaint.

4 Tsakopoulos Investments additionally argues that the

5       <sup>3</sup> In its seventh cause of action, Tsakopoulos Investments  
 6 does not clarify what statutory provision was violated by the  
 7 FWS's failure to adequately respond to public comments, but it  
 8 alleges it arises under the APA. This claim could relate to the  
 9 failure to provide a meaningful notice and comment period and to  
 10 the economic exclusion analysis, both of which are mandatory  
 11 duties under the ESA that are subject to the notice requirement.  
 12 However, because the statutory basis for the claim is somewhat  
 13 unclear, it may be that this claim alone is not subject to the  
 14 ESA's notice requirement, and therefore may not be  
 15 jurisdictionally foreclosed. Even if Tsakopoulos Investments is  
 16 not barred from alleging the seventh claim in its complaint,  
 17 however, the claim is meritless. In this claim, Tsakopoulos  
 18 Investments alleges that,

19              Defendants failed to adequately respond to  
 20 significant comments, in violation of the  
 21 APA. Defendants received Blueprint growth  
 22 projections to 2025 by census tract for  
 23 Sacramento County, but declined to use these  
 24 growth figures in the August 2005 Final Rule.  
 25 This failure to comply with the APA constitutes  
 26 agency action that is arbitrary and  
 27 capricious, an abuse of discretion, or  
 28 otherwise not in accordance with law.

(Compl. ¶¶ 67-68.) Tsakopoulos Investments is referring to a "vision" developed by the Sacramento Area Council of Government ("SACOG") regarding growth in Sacramento County over the next fifty years, called a "Preferred Blueprint Alternative." (Admin. R. Vol. 2, Doc. # 291, at 17021719.)

The FWS received this comment and considered it, but ultimately rejected it as lacking merit. 70 Fed. Reg. at 46,931. The economic analysis the FWS commissioned was a twenty-year analysis, not a fifty-year analysis like the Blueprint. Therefore, it would have been difficult to integrate the Blueprint's analysis into the existing analysis the FWS conducted. Additionally, SACOG indicated that the Blueprint was not in a form where it could be considered "likely to occur" (Admin. R. Vol. 2, Doc. # 291, at 17021707), and it was only a version that would be prepared in the year 2030 that would "represent the land use pattern that is most likely to be built in the region." (Id. at 17021707, 17, 19.) For these reasons, even if the court had jurisdiction over this claim, it would conclude that the FWS's decision to disregard the Blueprint was not arbitrary or capricious.

1 Federal Defendants contradict themselves by contending on the one  
 2 hand that the mandatory nature of their critical habitat  
 3 designation subjects Tsakopoulos Investments' claims to the ESA's  
 4 notice requirement, and on the other hand that this court should  
 5 review the agency decision under a discretionary standard. The  
 6 Supreme Court has rejected this very argument, explaining that:

7 [T]he fact that the Secretary's ultimate decision is  
 8 reviewable only for abuse of discretion does not alter  
 9 the categorical requirement that, in arriving at his  
 10 decision, he "take into consideration the economic  
 11 impact, any other relevant impact" and "use the best  
 scientific data available." It is rudimentary  
 administrative law that discretion as to the substance  
 of the ultimate decision does not confer discretion to  
 ignore the required procedures of decisionmaking.

12 Bennett, 520 U.S. at 172.

13 The court further finds persuasive that on March 6,  
 14 2006, Tsakopoulos Investments sent Federal Defendants a letter in  
 15 which it stated, "[t]his letter also constitutes our 60-Day  
 16 Notice of Violation in accordance with 16 U.S.C. § 1540 (g) (2) (A)  
 17 and (c)." In this letter, Tsakopoulos Investments appears to  
 18 admit that the 60-day notice applied to its complaint and that it  
 19 was in fact bringing suit pursuant to the citizen suit provision  
 20 of the ESA. Yet, despite the apparent admission in this letter,  
 21 Tsakopoulos Investments filed its complaint only eight days  
 22 later.

23 Finally, this conclusion is in keeping with the very  
 24 purpose of the citizen-suit provision, which is to give  
 25 defendants an "opportunity to review their actions and take  
 26 corrective measures if warranted. The provision therefore  
 27 provides an opportunity for settlement or other resolution of a  
 28 dispute without litigation." Southwest Center, 143 F.3d at 520.

1 For these reasons, the court concludes that it lacks jurisdiction  
2 over all causes of action alleged by Tsakopoulos Investments and  
3 cannot consider their merits.

4       4. Plaintiff-Intervenor City of Suisun

5           The Federal Defendants also contend that the court  
6 lacks jurisdiction over Plaintiff-Intervenor City of Suisun's  
7 claims. On March 3, 2006, the court permitted intervention by  
8 the City but restricted the City's involvement "to raising  
9 arguments which relate to the issues concerning the species which  
10 are on the 88-acre parcel of land that is within the sphere of  
11 influence and the area designated as critical habitat." (Mar. 3,  
12 2006 Order 5-6.) Plaintiff-intervenor City of Suisun alleges  
13 eight claims for relief, the first seven of which refer to  
14 mandatory duties for the FWS under 16 U.S.C. § 1533(a)(3) &  
15 (b)(2). As previously discussed, under the ESA, "any person may  
16 commence a civil suit on his own behalf" beginning "sixty days  
17 after written notice of the violation has been given to the  
18 Secretary." 16 U.S.C. § 1540(g)(1) (emphasis added). The United  
19 States Supreme Court has established that this notice requirement  
20 is a mandatory condition precedent for suit, and that the  
21 requirement is to be "strictly construed." See Hallstrom, 493  
22 U.S. at 26.

23           There is no indication that the City provided the  
24 Secretary with the requisite 60-day notice. Instead, the City  
25 alleges that "[p]laintiffs Home Builders Association et al.  
26 timely provided Defendants written notice of violation in  
27 accordance with 16 U.S.C. § 1540(g)(2)(C). The claims in the  
28 City's instant action were all raised by Plaintiffs Home Builders

1 Association et al.'s notice of violation and amendment thereto."  
 2 (Compl. ¶ 3.)<sup>4</sup> Additionally, allowing Home Builders' notice to  
 3 suffice as joint notice for the City of Suisun's claims would  
 4 frustrate one of the primary purposes of the notice requirement--  
 5 "the facilitation of a negotiated resolution." Idaho Sporting  
 6 Congress, 952 F. Supp. 690, 695 (D. Idaho 1996). Finally, the  
 7 court's order limiting the scope of the City's claims expressly  
 8 provided that the claims only cover an 88-acre parcel land owned  
 9 by the City and designated as critical habitat. There is no  
 10 reference to this land in plaintiffs Home Builders' notice (see  
 11 Home Builders' Compl. Ex. 2), and therefore, even assuming that  
 12 notice by proxy is permissible, Home Builders' notice would not  
 13 suffice to provide the Secretary with notice of the City's  
 14 claims.

15 Like the court in Kern County, this court is aware that  
 16 "a strict construction of the 60-day notice requirement may  
 17 appear to be inequitable and a waste of judicial resources."  
 18 2002 U.S. Dist. LEXIS 24125, at \*22 (citing Hallstrom, 493 U.S.  
 19 at 32; Washington Trout v. McCain Foods, Inc., 45 F.3d 1351,  
 20 1354-55 (9th Cir. 1995)). Yet, it is inescapable that, in this  
 21 situation, courts "lack authority to consider the equities." Id.  
 22 Additionally, if this court exercised jurisdiction over claims  
 23 that had not been properly disclosed to and noticed before the  
 24 agency, the court "would usurp the right of the applicable  
 25 governmental agencies to evaluate and act upon the merits of the

---

26  
 27       <sup>4</sup> Because the City additionally has joined in plaintiffs  
 28 Home Builders' motion for summary judgment, rather than filing  
 its own motion for summary judgment, there are no arguments  
 before the court on the City's behalf.

1 claims prior to judicial review." ONRC Action v. Columbia  
 2 Plywood, Inc., 286 F.3d 1137, 1144 (9th Cir. 2002). For these  
 3 reasons, the court does not have jurisdiction to reach the merits  
 4 of the arguments made by the City of Suisun in its first seven  
 5 claims.<sup>5</sup>

6       B. Federal Defendants' Motion to Strike

7           The Federal Defendants move to strike extra-record  
 8 evidence proffered by Tsakopoulos Investments and the  
 9 Environmental Groups. In the Ninth Circuit, materials not  
 10 present in the administrative record may be considered by a court  
 11 reviewing an agency decision in only four situations: (1) when  
 12 they are "necessary to determine whether the agency has  
 13 considered all relevant factors and has explained its decision,"  
 14 (2) "when the agency has relied on documents not in the record,"  
 15 (3) "when supplementing the record is necessary to explain  
 16 technical terms or complex subject matter," or (4) "when  
 17 plaintiffs make a showing of agency bad faith." Sw. Ctr. for  
 18 Biological Diversity v. U.S. Forest Service, 100 F.3d 1443, 1450  
 19 (9th Cir. 1996) (internal quotations omitted). Additionally,  
 20 where specific facts must be presented in the form of affidavits  
 21 or other evidence to establish standing, the court will take  
 22 these facts to be true for the purposes of a summary judgment  
 23 motion. See Lujan v. Defenders of Wildlife, 504 U.S. 555, 561  
 24 (1992); see also Nw. Envt'l Def. Ctr. v. Bonneville Power Admin.,  
 25 117 F.3d 1520, 1528 (9th Cir. 1997) (considering extra-record

26           <sup>5</sup> The only remaining claim by the City of Suisun is that  
 27 the critical habitat designation is void because of the FWS's  
 28 failure to comply with the National Environmental Policy Act, 42  
 U.S.C. §§ 4321-4370.

1 affidavits for the purpose of determining whether the plaintiffs  
2 had standing to sue).

3 The court has not considered the documents submitted by  
4 Tsakopoulos Investments, as they were immaterial to the  
5 jurisdictional issues that prevented the court from reviewing  
6 Tsakopoulos Investments' first six claims, and also immaterial to  
7 the seventh claim. Therefore, the motion to strike is  
8 unnecessary as to those documents.

9 Additionally, the Environmental Groups submitted extra-  
10 record declarations in order to establish standing. To the  
11 extent that the declarations could be used in support of other  
12 arguments, the court has not relied upon them, and the  
13 Environmental Groups have indicated that they do not intend the  
14 declarations be used for any other purpose. Therefore, the court  
15 declines to strike these declarations.

16 Federal Defendants also move to strike (1) the study,  
17 "Report: Initial Assessment of Habitat Characteristics and  
18 Conservation Potential in Western Placer County," which is  
19 attached as Exhibit 3 to the Delfino Declaration, and (2)  
20 portions of the Delfino Declaration that refer to this study and  
21 lines of the environmental groups' summary judgment brief that  
22 discuss it. The Environmental Groups contend that consideration  
23 of this study is "necessary to determine whether the agency has  
24 considered all relevant factors and has explained its decision,"  
25 because it demonstrates that the FWS has failed to consider the  
26 economic benefits of designating critical habitat. The court  
27 will therefore consider this extra-record evidence.

28 The parties also dispute whether the court can consider

1 an article entitled "Habitat Cave-In?," which addresses an  
2 attempt by Riverside County to develop protected land and notes  
3 the effect of political considerations on a habitat conservation  
4 plan. The court is not persuaded that an article published in  
5 the Riverside Press-Enterprise is "necessary" to demonstrate that  
6 FWS considered all relevant factors when it appears to be  
7 irrelevant. Therefore, the court will strike this extra-record  
8 evidence that is attached to the Environmental Groups' motion for  
9 summary judgment as Exhibit 4.

10 Finally, Federal Defendants move to strike the second  
11 exhibit to the Delfino Declaration, a settlement agreement that  
12 resulted in the Placer County Report, and the accompanying  
13 discussion of the circumstances that led to settlement agreement.  
14 "Federal courts may 'take notice of proceedings in other courts,  
15 both within and without the federal judicial system, if those  
16 proceedings have a direct relation to the matters at issue.'"  
17 Cactus Corner, LLC v. U.S. Dept. of Agriculture, 346 F. Supp. 2d  
18 1075, 1092 (E.D. Cal. 2004) (quoting United States ex rel

19 Robinson Rancheria Citizens Council v. Borneo, Inc., 971 F.2d  
20 244, 248 (9th Cir. 1992)). It is unclear whether a settlement  
21 can be considered a proceeding, and it is additionally unclear  
22 that this settlement has a direct relation to the proceedings  
23 here. Therefore, the court will not take judicial notice of the  
24 settlement agreement. The court therefore grants Federal  
25 Defendants' motion to strike this report and the related  
26 discussion beginning on page 16 at line 20 of the Environmental  
27 Groups' motion for summary judgment and continuing through page  
28 17, line 3.

1           C. Summary Judgment

2           Summary judgment is proper "if the pleadings,  
 3 depositions, answers to interrogatories, and admissions on file,  
 4 together with the affidavits, if any, show that there is no  
 5 genuine issue as to any material fact and that the moving party  
 6 is entitled to judgment as a matter of law." Fed. R. Civ. P.  
 7 56(c). A material fact is one that could affect the outcome of  
 8 the suit, and a genuine issue is one that could permit a  
 9 reasonable jury to enter a verdict in the non-moving party's  
 10 favor. Anderson v. Liberty Lobby, Inc., 477 U.S. 242, 248  
 11 (1986). The party moving for summary judgment bears the initial  
 12 burden of establishing the absence of a genuine issue of material  
 13 fact, and can satisfy this burden by presenting evidence that  
 14 negates an essential element of the non-moving party's case.  
 15 Celotex Corp. v. Catrett, 477 U.S. 317, 322-23 (1986).  
 16 Alternatively, the movant can demonstrate that the non-moving  
 17 party cannot provide evidence to support an essential element  
 18 upon which it will bear the burden of proof at trial. Id.

19           1. Administrative Procedure Act

20           Judicial review of actions by administrative agencies  
 21 is generally governed by the Administrative Procedure Act, 5  
 22 U.S.C. § 706(2)(A), which states that a reviewing court must set  
 23 aside agency actions found to be "arbitrary, capricious, an abuse  
 24 of discretion, or otherwise not in accordance with the law." See  
 25 Wetlands Action Network v. United States Army Corps of Eng'rs,  
 26 222 F.3d 1105, 1114 (9th Cir. 2000).

27           This is a "deferential standard . . . designed to  
 28 ensure that the agency considered all of the relevant factors and

1 that its decision contained no clear error of judgment." Pac.  
 2 Coast Fed'n of Fishermen's Ass'ns, Inc. v. Nat'l Marine Fisheries  
 3 Serv., 265 F.3d 1028, 1034 (9th Cir. 2001) (internal quotations  
 4 omitted). An agency action should only be overturned when the  
 5 agency "has relied on factors which Congress has not intended it  
 6 to consider, entirely failed to consider an important aspect of  
 7 the problem, offered an explanation for its decision that runs  
 8 counter to the evidence before the agency, or is so implausible  
 9 that it could not be ascribed to a difference in view or the  
 10 product of agency expertise." Id. (quoting Motor Vehicle Mfrs.  
 11 Ass'n v. State Farm Mutual Auto. Ins. Co., 463 U.S. 29, 43  
 12 (1983)). The court must ask whether the agency considered "the  
 13 relevant factors and articulated a rational connection between  
 14 the facts found and the choice made." Natural Res. Def. Council  
 15 v. United States Dep't of the Interior, 113 F.3d 1121, 1124 (9th  
 16 Cir. 1997).

17         The court is not empowered to substitute its judgment  
 18 for that of the agency. Az. Cattle Growers' Ass'n v. U.S. Fish &  
 19 Wildlife Serv., 273 F.3d 1229, 1236 (9th Cir. 2001) (citing  
 20 Citizens to Preserve Overton Park, Inc. v. Volpe, 401 U.S. 402,  
 21 416 (1971)). Moreover, the court should review the agency's  
 22 actions based on the administrative record presented by the  
 23 agency. See Center for Biological Diversity v. U.S. Fish &  
 24 Wildlife Serv., 450 F.3d 930, 943 (9th Cir. 2006) ("When  
 25 reviewing an agency decision, the focal point for judicial review  
 26 should be the administrative record already in existence, not  
 27 some new record made initially in the reviewing court.")  
 28 (internal quotations and citations omitted).

1       2. Endangered Species Act

2              The FWS is subject to additional regulations when it  
3 lists a species as threatened or endangered. Under § 4(a) of the  
4 Endangered Species Act ("ESA"), when the FWS lists a species, "to  
5 the maximum extent prudent and determinable," it must also  
6 designate a critical habitat for that species. 16 U.S.C. §  
7 1533(a)(3). "Critical habitat" refers to geographic areas that  
8 are "essential" for the conservation of the species. 16 U.S.C. §  
9 1532(5)(A). Land is considered critical habitat when it is "a  
10 specific area within the geographical area occupied by the  
11 species" that has physical and biological features essential to  
12 conservation and that "may require special management  
13 considerations of protection." Id. Specific areas outside of  
14 the geographical area occupied the species may also be designated  
15 as critical habitat if the Secretary determines they are  
16 "essential for the conservation of the species." Id. In other  
17 words, critical habitat is land essential to the conservation of  
18 the species, but it includes the habitat occupied by the species  
19 as well as land on which the species cannot be found, provided  
20 the Secretary determines that land unoccupied by the species is  
21 nevertheless necessary for its conservation.

22              Pursuant to § 4(b)(2) of the ESA, the FWS must  
23 designate critical habitat based on the "best scientific data  
24 available and after taking into consideration the economic  
25 impact, and any other relevant impact, of specifying any  
26 particular area as critical habitat." 16 U.S.C. § 1533(b)(2)  
27 (emphasis added). The FWS may exclude an area from critical  
28 habitat when it "determines that the benefits of such exclusion

1 outweigh the benefits of specifying such areas as part of the  
2 critical habitat," provided exclusion will not result in the  
3 extinction of the species. Id. § 1533(b) (2). The FWS is  
4 prohibited from designating lands owned by the Department of  
5 Defense and subject to an integrated natural resources management  
6 plan "if the Secretary determines in writing that such a plan  
7 provides a benefit to the species. Id. § 1533(a) (3) (B) (i). The  
8 FWS must publish regulations in the Federal Register regarding  
9 its critical habitat designation after a notice and comment  
10 period. Id. § 1533(a) (3) (A). A court reviewing the FWS's  
11 actions taken pursuant to the ESA must ask whether the agency  
12 considered "the relevant factors and articulated a rational  
13 connection between the facts found and the choice made." Natural  
14 Res. Def. Council v. U.S. Dep't of the Interior, 113 F.3d 1121,  
15 1124 (9th Cir. 1997).

16       3. Home Builders' Motion for Summary Judgment

17       Home Builders argue that, in making the critical  
18 habitat designation, the FWS: (1) failed to describe the specific  
19 areas occupied by the species within the subunits designated as  
20 critical habitat, (2) improperly included structures and other  
21 developed areas that do not contain the primary constituent  
22 elements (PCEs) essential to conservation of the fifteen species,  
23 (3) inadequately described the species' PCEs, and (4) conducted  
24 economic impact analysis without considering coextensive or  
25 cumulative impacts or explaining why certain tracts were excluded  
26 and others were included. Home Builders contends that these  
27 actions constitute violations of the ESA, the APA, and the NEPA,  
28 and that the critical impact designation should therefore be set

1 aside.

2           a. Failure to Distinguish Unoccupied Habitat

3           Home Builders argue that the FWS did not distinguish  
4 between unoccupied and occupied habitat as required under the  
5 ESA. As noted above, there are different standards for critical  
6 habitat designation of occupied areas than for designation of  
7 unoccupied areas. In short, there is a higher standard for  
8 critical habitat designation of areas unoccupied by the species--  
9 the Secretary must make a determination that such areas are  
10 essential to the conservation of the species. 16 U.S.C. §  
11 1532(A)(ii).

12           Although the FWS determined that each of the critical  
13 habitat units is occupied by the species, it admittedly included  
14 some unoccupied subsections within the critical habitat units.  
15 (Fed. Defs.' Cross-Mot. for Summ. J. 19 (citing 70 Fed. Reg. at  
16 46,945; 68 Fed. Reg. at 46,721, 46,722-44).) The FWS recognized  
17 that some unoccupied areas were likely to have been included,  
18 defining the term "unoccupied" as "an area that contains no  
19 hatched vernal pool crustaceans or observed above-ground plants,  
20 and that is unlikely to contain a viable cyst or seed bank." 70  
21 Fed. Reg. 46,924, 46,929; 68 Fed. Reg. at 46,715.

22           The FWS points out that it is difficult to distinguish  
23 between occupied and unoccupied areas due to the nature of vernal  
24 pools. Vernal pools are ephemeral in nature, and vernal pool  
25 species are characterized by their ability to remain in a dormant  
26 phase for years at a time. The size of a vernal pool also  
27 fluctuates from year to year, and in some years, the pool itself  
28 may never form. As previously discussed, vernal pools exist in

1 clusters that are fed with water by "low drainage pathways"  
2 called swales. Thus, the FWS concluded it "cannot quantify in  
3 any meaningful way what proportion of each critical habitat unit  
4 may actually be occupied by the vernal pool crustaceans or vernal  
5 pool plants at any one time," and had likely included some  
6 unoccupied areas for that reason. Id.

7 The FWS's duty under the ESA is to make a critical  
8 habitat designation "on the basis of the best scientific data  
9 available." Id. § 1333(b) (2) (emphasis added). Accordingly, the  
10 FWS need not conduct its own studies to improve upon existing  
11 scientific data. Sw. Center for Biological Diversity v. Babbitt,  
12 215 F.3d 58, 60-61 (D.C. Cir. 2000); see also Building Indus.  
13 Ass'n v. Norton, 247 F.3d 1241, 1246 (D.C. Cir. 2001) ("the  
14 Service must utilize the 'best scientific . . . data available,'  
15 not the best scientific data possible" (quoting §  
16 1533(b) (1) (A))). Moreover, the FWS was required to publish its  
17 critical habitat designation concurrently with the regulation  
18 listing the species as threatened or endangered, or, if critical  
19 habitat was not determinable at the time of listing, no later  
20 than a year after the listing of the species. 16 U.S.C. §  
21 1533(b) (6) (C) (ii). Even if the FWS delays its critical habitat  
22 designation for a year, the designation should then be made  
23 "based on such data as may be available at that time." Id.  
24 Moreover, "[t]he designation of critical habitat is to coincide  
25 with the final listing decision absent extraordinary  
26 circumstances." Natural Res. Def. Council v. U.S. Dept. of the  
27 Interior, 113 F.3d 1121, 1126 (9th Cir. 1997) (quoting N. Spotted  
28 Owl v. Lujan, 758 F.Supp. 621, 626 (W.D. Wash. 1991)). Thus,

1 because of the statutory constraints the FWS faced and the unique  
2 characteristics of vernal pools and the species that inhabit  
3 them, the FWS appropriately made its critical habitat designation  
4 in a manner consistent with the scientific evidence available.

5 The significance of Home Builders' argument is that the  
6 FWS may not have properly designated habitat because it did not  
7 precisely follow the statutory definition. However, the  
8 distinction between the two types of habitat is that unoccupied  
9 habitat must be more carefully designated. Cape Hatteras Access  
10 Pres. Alliance v. U.S. DOI, 344 F. Supp. 2d 108, 119 (D.D.C.  
11 2004) ("[B]oth occupied and unoccupied areas may become critical  
12 habitat, but, with unoccupied areas, it is not enough that the  
13 area's features be essential to conservation, the area itself  
14 must be essential."). Given the difficulty in determining  
15 whether a particular habitat is occupied or unoccupied by a  
16 vernal pool species, the FWS reasonably determined whether  
17 habitat was critical according to the more exacting of the two  
18 standards.

19 Moreover, there is theoretically no limit to the degree  
20 of precision agencies could be compelled to undergo before  
21 designating critical habitat under Home Builders' argument.  
22 Within a critical habitat unit, it is entirely possible that a  
23 single square inch of the land at issue would be wholly  
24 unoccupied by the relevant species. Clearly, an agency should  
25 not have to make a critical habitat determination on such a fine  
26 scale, but the logical extension of Home Builders' argument would  
27 seem to impose just such a requirement on the agency. Therefore,  
28 the critical habitat designation will pass muster regardless of

1 whether the habitat designated was occupied or unoccupied.<sup>6</sup> The  
 2 court will defer to the agency's reasonable judgment on this  
 3 issue, and finds that the fact that the FWS did not expressly  
 4 delineate which portions of the habitat were occupied and which  
 5 portions were unoccupied does not constitute a violation of the  
 6 ESA.

7                   b. Failure to Adequately Identify PCEs

8 \_\_\_\_\_ For occupied critical habitats, the FWS is required to  
 9 identify "physical or biological features essential to the  
 10 conservation of the species," that "may require special  
 11 management considerations or protection." 16 U.S.C. §  
 12 1532(5) (A) (i). In FWS regulations, the "physical and biological  
 13 features" are also referred to as "primary constituent elements"  
 14 or "PCEs" of the critical habitat. 50 C.F.R. § 424.12(b) (5).  
 15 Home Builders argue that the PCEs identified by the FWS are  
 16 inadequate and are not described with sufficient particularity.

17                  The PCEs listed by the FWS for the Conservancy fairy  
 18 shrimp in its August, 2005 final rule are:

---

19                 <sup>6</sup> Home Builders argue that at some points the FWS  
 20 described critical habitat units as "important," "unique," or  
 21 "unusual," instead of as "essential." (Home Builders' Mot. for  
 22 Summ. J. 25.) However, the FWS' variation in word choice does  
 23 not change the fact that the FWS did determine that each of the  
 24 critical habitat units was essential to the conservation of the  
 25 species. See 68 Fed. Reg. at 46,715-16 ("[W]e determined that  
 26 all currently known extant occurrences of the 11 vernal pool  
 27 plants and 2 of the 4 vernal pool crustaceans (Conservancy fairy  
 28 shrimp and longhorn fairy shrimp) are essential to the  
 conservation of the species, due to their limited geographic and  
 ecological distributions (criteria 1 and 2), low overall number  
 of populations (criterion 1), and the seriousness of the threats  
 posed to remaining populations, including fragmentation of  
 habitat. For the other two vernal pool crustaceans (vernal pool  
 fairy shrimp and vernal pool tadpole shrimp), we were able to  
 meet the criteria listed above without designating all occupied  
 areas . . . " (emphasis added)).

(i) Topographic features characterized by mounds and swales, and depressions within a matrix of surrounding uplands that result in complexes of continuously, or intermittently, flowing surface water in the swales connecting the pools described in PCE (ii), providing for dispersal and promoting hydroperiods of adequate length in the pools.

(ii) Depressional features including isolated vernal pools with underlying restrictive soil layers that become inundated during winter rains and that continuously hold water for a minimum of 19 days (Helm 1998), in all but the driest years; thereby providing adequate water for incubation, maturation, and reproduction. As these features are inundated on a seasonal basis, they do not promote the development of obligate wetland vegetation habitats typical of permanently flooded emergent wetlands.

(iii) Sources of food, expected to be detritus occurring in the pools, contributed by overland flow from the pools' watershed, or the results of biological processes within the pools themselves, such as single-celled bacteria, algae, and dead organic matter, to provide for feeding.

(iv) Structure within the pools described in PCE (ii), consisting of organic and inorganic materials, such as living and dead plants from plant species adapted to seasonally inundated environments, rocks, and other inorganic debris that may be washed, blown, or otherwise transported into the pools, that provide shelter.

70 Fed. Reg. at 46,934-35. The only difference between this PCE and the PCEs of the remaining three vernal pool crustaceans is the minimum number of days the vernal pool must be filled with water in all but the driest years, as described in section (ii). Id. at 46,934-37. The PCEs for the eleven plants are similar to sections (i) and (ii) above, and are identical to each other. Id. at 46,937-42. According to the relevant federal regulations, “[p]rimary constituent elements may include, but are not limited to, the following: roost sites, nesting grounds, spawning sites,

1 feeding sites, seasonal wetland or dryland, water quality or  
 2 quantity, host species or plant pollinator, geological formation,  
 3 vegetation type, tide, and specific soil types." 50 C.F.R. §  
 4 424.12. The PCEs chosen by the FWS describe the seasonal  
 5 character of the pools, the shelter they provide for crustacean  
 6 species, their underlying soil and the manner of formation, and  
 7 also note that the pools themselves are sites where the species  
 8 feed, reproduce, and mature.

9 Home Builders argue that the identification of a  
 10 "matrix of surrounding uplands" necessary for the periodic flow  
 11 of water into the pools is not sufficiently specific.<sup>7</sup> In  
 12

---

13       <sup>7</sup> Home Builders additionally contend that the FWS's  
 14 definitions would allow land with only one PCE to be designated  
 15 as critical habitat, citing the following language in the August,  
 16 2005 Final Rule: "PCEs described for each species do not have to  
 17 occur simultaneously within a unit for the unit to constitute  
 18 critical habitat for any of the 15 vernal pool species." Home  
 19 Builders argue that a PCE cannot be "essential" for species  
 20 conservation if it need not be present in a given critical  
 21 habitat.

22       However, as discussed in the text, vernal pools must be  
 23 fed by upland areas, and the first PCE describes "[t]opographic  
 24 features characterized by mounts and swales, and depressions  
 25 within a matrix of surrounding uplands that result in complexes  
 26 of continuously, or intermittently, flowing surface water in the  
 27 swales connecting the pools." These upland areas may not be  
 28 occupied by the species, and may not contain a vernal pool,  
 although they may be linked to one or several. Regardless of  
 whether they contain a vernal pool, or other PCEs, they are still  
 essential to the conservation of the 15 vernal pool species.

Home Builders simply pose hypotheticals suggesting that  
 a plain of uplands unconnected to a vernal pool or a "homeowner's  
 backyard studded with bits of 'inorganic debris'" may constitute  
 a critical habitat under this definition. The PCEs are  
 sufficiently specific to preclude such an outcome--the first PCE  
 describes a matrix of uplands that result in water that flows to  
 pools, and the fourth PCE requires structure within the pools  
 consisting of organic and inorganic materials. Moreover, Home  
 Builders do not present scientific data to the contrary, and when  
 prompted to do so during oral argument, counsel for Home Builders  
 could not explain how vernal pools could be better described in  
 light of the evidence available.

1 particular, they contend that there is no indication of the size  
2 of the uplands or the mounds or swales they contain, and no  
3 explanation of what kind of food in the form of detritus would be  
4 acceptable. Home Builders cite other situations in which the FWS  
5 has provided limits on uplands essential to the conservation of  
6 other species, including the California tiger salamander and the  
7 California red-legged frog. (Pls.' Home Builders' Mot. for Summ.  
8 J. 15.) As the Federal Defendants note, however, in both of  
9 these instances, the FWS placed limitations on the upland habitat  
10 based on the available scientific evidence. See 70 Fed. Reg.  
11 74,138, 74,146-47 (Dec. 14, 2005) (circumscribing the tiger  
12 salamander's upland range because "[t]he only known study we are  
13 aware of that specifically investigated movement of California  
14 tiger salamanders between breeding ponds projected that 0.70 mi  
15 (1.1 km) would encompass 99 percent of interpond dispersal"); 70  
16 Fed. Reg. 66,906, 66,912 (Nov. 3, 2005) (delimiting "[u]pland  
17 habitat that contains the features essential to the conservation  
18 of the species" to 200 feet surrounding the aquatic habitat  
19 "based on the dispersal capabilities of the subspecies" and on  
20 two studies that indicated that the subspecies could inhabit  
21 upland habitats in a 200 foot radius of the aquatic habitats for  
22 between twenty and seventy-seven days).

23 By contrast, Home Builders do not reference scientific  
24 data with regard to the species or PCEs in this case that the FWS  
25 should have considered and disregarded. See Kern County Farm  
26 Bureau v. Allen, 450 F.3d 1072, 1081 (9th Cir. 2006) (concluding  
27 that a plaintiff's argument that the FWS failed to rely on the  
28 best scientific data available was insufficient because the

1 plaintiff "point[ed] to no data that was omitted from  
 2 consideration," and "absent superior data . . . occasional  
 3 imperfections do not violate § 1533(b)(1)(A)" (quoting Building  
 4 Indus. Ass'n of Superior Cal. v. Norton, 247 F.3d 1241, 1246  
 5 (D.C. Cir. 2001)) (modification removed)). The scientific  
 6 evidence the agency relied on merely indicated that uplands and  
 7 detritus are crucial to the survival of the species, but did not  
 8 indicate the size of the uplands or the kinds of detritus  
 9 necessary. See, e.g., 70 Fed. Reg. at 46,924-25 ("Upland areas  
 10 associated with vernal pools are also an important source of  
 11 nutrients to vernal pool organisms (Eriksen and Belk 1999; Wetzel  
 12 1975).

13 Vernal pool habitats derive most of their nutrients  
 14 from detritus (decaying matter) washed into pools from adjacent  
 15 uplands, and these nutrients provide the foundation for a vernal  
 16 pool aquatic community's food chain. Detritus (both living and  
 17 dead organic matter) is a primary food source for the vernal pool  
 18 crustaceans addressed in this rule (Eriksen and Belk 1999)."); 68  
 19 Fed. Reg. at 46,704 (noting that the matrix of surrounding  
 20 uplands "contribute to the filling and drying of the vernal pool,  
 21 maintain suitable periods of pool inundation, and maintain water  
 22 quality and soil moisture to enable the 15 vernal pool species to  
 23 carry out their lifecycles."); 68 Fed. Reg. at 46,688 ("Fairy  
 24 shrimp are filter feeders, and consume algae, bacteria, protozoa,  
 25 rotifers, and bits of detritus as they move through the water.").  
 26 Thus, the FWS's description of these PCEs is reasonably specific,  
 27 and the court has no cause to disturb the agency's finding.

28 Home Builders additionally argue that the length of the

hydroperiods are insufficiently identified, but do not present scientific evidence that the FWS neglected to consider. (Home Builders' Mot. for Summ. J. 15.) Under element (ii), the pools must be inundated for different amounts of time, depending on the species, ranging from eighteen to forty-one days. As described in the PCEs themselves, the length of time the pools are inundated is an element necessary to ensure "vernal pool crustacean hatching, growth, and reproduction," during at least some years. The amount of time required for these activities varies by species. See 70 Fed. Reg. at 46,934-36 (tailoring the hydroperiod length to the minimum maturation times for fairy shrimp based on a 1998 study). Moreover, the amount of annual precipitation in the Mediterranean climates where vernal pools are found fluctuates from year to year. 67 Fed. Reg. at 59,885. Thus, as with the elements of the PCEs in general, the FWS's determination of this PCE is based upon scientific evidence, and Home Builders' arguments to the contrary are unpersuasive because they have no scientific basis.<sup>8</sup>

c. Failure to Identify the Point at which Conservation will be Achieved

8        Additionally, Home Builders contend that elements (i)  
22 and (ii) of the PCEs are contradictory--element (i) describes  
23 "complexes of continuously or intermittently flowing surface  
24 water in the swales connecting the pools," whereas element (ii)  
25 denotes vernal pools that are inundated only seasonally. This  
26 argument is largely semantic. Swales are "shallow drainages that  
27 carry water seasonally," but they may "remain saturated for much  
28 of the wet season." 68 Fed. Reg. at 46,685. It is entirely reasonable to describe a drainage that is continuously saturated during a particular time of year as having "continuously flowing surface water" at that time. Therefore, the court is not persuaded that this superficial inconsistency renders the description of the PCEs unreasonable.

1           Home Builders contend that because the FWS has not  
2 determined when the protected species will be deemed conserved,  
3 the FWS is unable to make a determination as to what PCEs are  
4 essential to the conservation of the species. In support of this  
5 argument, Home Builders rely on Home Builders Ass'n of N. Cal. v.  
6 FWS ("HBANC"), 268 F. Supp. 2d 1197, 1214 (E.D. Cal. 2003), in  
7 which Judge Ishii concluded that "if the Service has not  
8 determined at what point the protections of the ESA will no  
9 longer be necessary for the [conservation of the listed species],  
10 it cannot possibly identify the physical or biological features  
11 that are an indispensable part of bringing the [species] to that  
12 point." The court in HBANC did not cite any caselaw for this  
13 proposition and instead arrived at it through the application of  
14 logic. After examining the statutory provisions of the ESA, this  
15 court is unpersuaded by the logic in HBANC, and will therefore  
16 take a different approach.

17           PCEs are simply "physical or biological features  
18 essential to the conservation of the species" that "may require  
19 special management considerations or protection." 16 U.S.C. §  
20 1532(5)(A)(i). It is true that a PCE described in a critical  
21 habitat designation must be "essential to the conservation of the  
22 species." 16 U.S.C. § 1532(5)(A)(i). Further, under the ESA,  
23 "the terms 'conserve', 'conserving', and 'conservation' mean to  
24 use and the use of all methods and procedures which are necessary  
25 to bring any endangered species or threatened species to the  
26 point at which the measures provided pursuant to this chapter are  
27 no longer necessary." 16 U.S.C.A. § 1532. Although PCEs must be  
28 described in a critical habitat designation, there is no

1 indication in the ESA that the agency must simultaneously prepare  
2 objective, measurable criteria indicating when the ultimate goal  
3 of conservation of the species will be achieved.

4 By contrast, the subsections of the ESA relating to the  
5 development of recovery plans do contain such a requirement:

6 The Secretary shall develop and implement plans  
7 (hereinafter in this subsection referred to as  
8 "recovery plans") for the conservation and  
survival of endangered species . . . The  
Secretary, in developing and implementing  
recovery plans, shall, to the maximum extent  
practicable --

9 . . .  
10 (B) incorporate in each plan--

11 (i) a description of such site-specific  
12 management actions as may be necessary  
to achieve the plan's goal for the  
conservation and survival of the species;

13 (ii) objective, measurable criteria which,  
14 when met, would result in a determination,  
in accordance with the provisions of this  
15 section, that the species be removed from  
the list . . . .

16 U.S.C. § 1533(f)(1). Thus, in the context of recovery plans,  
17 the ESA contains a requirement that the FWS incorporate in their  
18 recovery plan the objective, measurable criteria that will  
19 indicate when conservation has been achieved. The lack of a  
20 similar provision in the context of critical habitat designation  
21 indicates that Congress did not intend to require conservation  
22 criteria to be determined at that stage or in that context. See  
23 Gozlon-Peretz v. United States, 498 U.S. 395, 404 (1991) (stating  
24 that "[w]here Congress includes particular language in one  
25 section of a statute but omits it in another section of the same  
26 Act, it is generally presumed that Congress acts intentionally  
27 and purposely in the disparate inclusion or exclusion") (quoting  
28

1       Russello v. United States, 464 U.S. 16, 23 (1983)). Thus, Home  
 2 Builders' argument appears to be inconsistent with Congressional  
 3 intent.<sup>9</sup>

4           Additionally, it not clear why the determination of the  
 5 point at which conservation will be achieved is necessary to  
 6 identify the elements of a habitat that are essential to  
 7 conservation of the species. An element of the environment that  
 8 is necessary to the survival of a species, such as food, shelter,  
 9 or any necessary condition for its habitat to exist, would be  
 10 essential to conservation of the species regardless of when or if  
 11 conservation is achieved. Simply put, if the food a species  
 12 needs to survive was not present in a particular area, the goal  
 13 of conserving that species in that area would be unattainable.<sup>10</sup>  
 14 Therefore, the court must disagree with the conclusion in HBANC  
 15 and will not require the FWS to have determined the point at  
 16 which conservation of the vernal pool species would be achieved.

17           d.    Failure to Adequately Identify the Specific Areas  
 18                   within the Geographic Area Occupied by the Species  
 19                   Where the Essential Physical or Biological  
 20                   Features are Found

---

22           <sup>9</sup> Moreover, a Draft Recovery Plan prepared by the FWS in  
 23 October, 2004, does contain a section devoted to "Recovery  
 24 Criteria." This section denotes species-specific recovery  
 25 criteria, including criteria related to species occurrence and  
 habitat protection, reintroduction, and seed banking. (Supp. to  
 the Admin. Record (Documents Cited in the Admin. Record), Draft  
 Recovery Plan at III-84 through III-113 (October, 2004).)

26           <sup>10</sup> Home Builders make this point themselves, although in  
 27 the context of a different argument. They note, "[i]t does not  
 28 require a science degree to recognize that no species can survive  
 without food. . . . How will these species survive, let alone  
 recover, without food?" (Home Builders' Mot. Summ. J. 19.)

1           Home Builders argue that the FWS improperly designated  
 2 critical habitat by including areas that do not contain the  
 3 essential physical or biological features for the species. The  
 4 FWS admittedly did not exclude every developed area within the  
 5 critical habitat designation, although it "made every effort to  
 6 avoid designating developed areas such as buildings, paved areas,  
 7 boat ramps, and other structures that lack the PCEs for the 15  
 8 vernal pool species." 70 Fed. Reg. at 46,930. To this, Home  
 9 Builders responds that relying upon Section 7 consultations to  
 10 resolve the issue improperly delays the critical habitat  
 11 designation.<sup>11</sup> However, the FWS also noted that any structures  
 12 inadvertently left inside the critical habitat designation would  
 13 not be subject to Section 7 consultation unless they had some  
 14 effect on the species or PCEs. *Id.* ("Any such structures  
 15 inadvertently left inside critical habitat boundaries are not  
 16 considered part of the unit . . . [and] would not trigger section  
 17 7 consultations.").

18           Because of the exhaustive methods used by the FWS to  
 19 designate critical habitat, and Home Builders' silence on whether  
 20 there would be another method to obtain a more precisely  
 21 delineated critical habitat, the court cannot conclude that the  
 22 agency's actions were unreasonable or an abuse of discretion.

---

23

24           <sup>11</sup> "For any federal action that may affect a threatened or  
 25 endangered species (or its habitat), the agency contemplating the  
 26 action [] must consult with the consulting agency . . ."  
Gifford Pinchot Task Force v. U.S. Fish & Wildlife Service, 378  
 27 F.3d 1059, 1063 (9th Cir. 2004). The purpose of the consultation  
 28 is to ensure that the federal action is unlikely to jeopardize  
 the continued existence of the species and will not result in the  
 destruction or adverse modification of the critical habitat  
 designated for the species. *Id.*

1 The FWS initially used a computer program that evaluated  
2 Geographic Information System data from governmental agencies, as  
3 well as private sources. 68 Fed. Reg. at 46,713.<sup>12</sup> The following  
4 information was included in the Geographic Information System  
5 data: (1) current and historical species locations obtained from  
6 the California Natural Diversity Database, (2) maps of vernal  
7 pool grassland habitats, and (3) published species occurrence  
8 data in the FWS's possession. Id. These data were mapped<sup>13</sup> onto  
9 satellite aerial photography for the vernal pool regions that had  
10 been identified in the relevant scientific literature. Id.

11 Following an initial determination of the areas derived  
12 from these data, the FWS refined their maps using satellite  
13 imagery, watershed boundaries, geological information,  
14 elevational modeling data, soil type information, vegetation/land  
15 cover data, and agricultural and urban land use data. Id. They  
16 refined the areas selected by eliminating areas that did not have  
17 the appropriate plant species and developed areas that did not  
18 contain the PCEs. Id. After publication of the September 24,  
19 2002, proposed rule and a notice and comment period, the FWS  
20 evaluated its proposed critical habitat units once more based on  
21 information it had received. Id. This included information from  
22

---

23       <sup>12</sup> The FWS explained their procedures for designating  
24 critical habitat in the August, 2003 and August, 2005 rules, and  
25 the Federal Defendants concisely reiterate these procedures in  
their motion for summary judgment.

26       <sup>13</sup> The FWS generated legal descriptions of critical  
27 habitat units on Universal Transverse Mercator gridlines set  
28 every 328 feet, based on the implementing regulations of the ESA,  
which require the agency to use "reference points and lines as  
found on standard topographic maps of the area." 68 Fed. Reg. at  
46,704; 50 C.F.R. § 424.12(c).

1 local experts regarding the vernal pool habitats and species,  
2 detailed aerial photography sent in by county planning  
3 departments, computer-generated images of aerial photographs  
4 manipulated to have the geometric properties of a map, and in-  
5 person examinations of various locations. Id. The FWS used  
6 additional data from the Geographic Information System, including  
7 local data sets for specific areas; topographical information  
8 from the U.S. Geological Society; and smaller scale mapping  
9 efforts from regional entities. Id. Yet the FWS recognized that  
10 even this effort would not produce a perfect result, and that  
11 some developed areas would have inadvertently been incorporated  
12 into the critical habitat units. 70 Fed. Reg. at 46,930, 46,943.

13 Arguing that the FWS did not sufficiently specify the  
14 boundaries of the designation, Home Builders cites HBANC for the  
15 proposition that a critical habitat designation that includes  
16 "buildings, roads, canals, railroads, and large bodies of water"  
17 that do not contain "habitat components" or "one or more of the  
18 primary constituent elements" is an improper designation. 268 F.  
19 Supp. 2d at 1216. In HBANC, however, the defendants simply  
20 relied on the fact that section 7 consultation would not occur on  
21 developed areas, and argued that plaintiffs were seeking "an  
22 impracticable level of certainty in regard to the designation of  
23 the critical habitat." Id.

24 Federal Defendants, by contrast, have expressly  
25 described the careful procedures by which they determined what  
26 land constitutes critical habitat and sought to avoid designating  
27 developed areas as critical habitat. They simply have conceded  
28 that their methods are likely to be somewhat fallible, and Home

1 Builders have taken that admission to mean more than it does.  
 2 The court cannot conceive of additional methods that the Federal  
 3 Defendants could have reasonably undertaken to attain a higher  
 4 degree of precision in their critical habitat designation, and  
 5 Home Builders have not described any alternatives that would  
 6 improve the designation.<sup>14</sup> For these reasons, the court finds  
 7 that the FWS adequately identified the critical habitat units.<sup>15</sup>

8                   e. Improper Economic Impact Analysis

9                   The ESA provides that, "The Secretary shall designate  
 10 critical habitat . . . after taking into consideration the  
 11 economic impact . . . of specifying any particular area as  
 12 critical habitat." 16 U.S.C. § 1533(b)(2). The Secretary "may  
 13 exclude any area from critical habitat" if "the benefits of such  
 14 exclusion outweigh the benefits of specifying such area as part  
 15 of the critical habitat . . ." Id. The ESA thus provides a  
 16 standard by which to measure an agency's choice to exclude an  
 17 area based on economic or other considerations. The agency's  
 18

---

19                 <sup>14</sup> As its sole alternative proposal, Home Builders  
 20 indicates that Caltrans provided information regarding  
 21 transportation rights-of-ways that should be excluded, and the  
 22 FWS noted that it "did not have the time, resources, or  
 23 appropriate GIS data layers to segregate these areas from  
 adjacent vernal pool habitat . . ." 68 Fed. Reg. at 46,698.  
 Although such a situation is clearly not ideal, the court cannot  
 say from this evidence that the agency's determination was  
 arbitrary or capricious.

24                 <sup>15</sup> Additionally, Home Builders contend that the FWS must  
 25 separately identify the geographical area occupied by the species  
 26 prior to designating critical habitat. Home Builders cites no  
 authority for this requirement, aside from Webster's Third New  
International Dictionary and its own reading of the statute. For  
 27 the reasons discussed in the text, the court concludes that the  
 FWS did not make its critical habitat determination in an  
 28 arbitrary or capricious manner, and this unsupported argument  
 does not disturb the court's conclusion.

1 decision to exclude is not mandatory, but permissive.

2 As the Federal Defendants point out, the legislative  
 3 history of the statute confirms this reading, and clarifies that  
 4 the Secretary "is not required to give economics or any other  
 5 'relevant impact' predominant consideration in his specification  
 6 of critical impact. . . . The consideration and weight to be  
 7 given to any particular impact is completely within the  
 8 Secretary's discretion." H.R. Rep. No. 95-1625, at 16-17 (1978),  
 9 1978 U.S.C.A.N. 9453, 9466-67. Where there are no substantive  
 10 standards by which a court can review an agency's action, that  
 11 action is committed to agency discretion. See Selman v. United  
12 States, 941 F.2d 1060, 1063-64 (10th Cir. 1991). Here, the court  
 13 has no substantive standards by which to review the FWS's  
 14 decisions not to exclude certain tracts based on economic or  
 15 other considerations, and those decisions are therefore committed  
 16 to agency discretion. Thus, to the extent that any of Home  
 17 Builders' arguments relate to the FWS's decisions not to exclude  
 18 tracts, the court will not consider them.<sup>16</sup>

19 Home Builders also argue that the FWS erred by using a  
 20 methodology contrary to the Tenth Circuit's guidance in New  
21 Mexico Cattle Growers v. U.S. Fish & Wildlife Service, 248 F.3d  
 22 1277, 1285 (10th Cir. 2001). New Mexico Cattle Growers requires

---

23       <sup>16</sup> Home Builders argue that, based on the Federal  
 24 Defendants' concession that the critical habitat designation  
 25 inadvertently included some developed areas, the economic  
 26 benefits of designation are overstated and the cost-benefit  
 27 analysis is flawed. As discussed, supra, it is unclear how the  
 28 FWS could have avoided the inclusion of some developed areas in  
 its critical habitat designation, and the court cannot say that  
 consideration of some area inadvertently included in the critical  
 habitat designation led to an economic analysis that was  
 arbitrary, capricious, or contrary to law.

1 that, to evaluate a critical habitat designation, an agency must  
2 take into account "all of the economic impacts of a critical  
3 habitat designation regardless of whether those impacts are  
4 attributable co-extensively to other causes." Id. at 1284-85.  
5 In other words, the FWS must consider both the economic impact of  
6 the critical habitat designation itself and the economic impact  
7 of listing a species. Id.

8           The FWS expressly indicated that it followed the  
9 guidance provided by the Tenth Circuit in Cattle Growers, and  
10 that its "draft economic analysis estimates the total cost of  
11 species conservation activities without subtracting the impact of  
12 pre-existing baseline regulations (i.e., the cost estimates are  
13 fully co-extensive)." 70 Fed. Reg. at 46928. Moreover, to  
14 estimate the potential economic impact of the critical habitat  
15 designation, the FWS retained a consulting firm, CRA  
16 International. CRA International projected the economic effects  
17 that would occur in the census tracts affected by the  
18 designation, above and beyond the baseline of the existing  
19 regulatory and economic burden landowners and managers currently  
20 bear. (Admin R., Vol. 2, Doc. 358 at 45-46.) CRA International  
21 also determined the administrative costs that would be associated  
22 with Section 7 consultations, which were the primary impacts  
23 expected. (Id. at 10, 44.) CRA International considered costs  
24 attributable to the jeopardy standard (relating to the listing of  
25 a species) and costs due to the adverse modification standard  
26 (relating to the designation of critical habitat). (Id. at 10.)  
27 Because the vernal pool species occupy the critical habitat, it  
28 was "difficult [to] mak[e] a credible distinction between listing

1 and critical habitat effects within critical habitat boundaries.”  
 2 (Id.) Thus, CRA determined that “[t]he administrative costs of  
 3 these consultations, along with the costs of project  
 4 modifications resulting from these consultations, represent  
 5 compliance costs associated with the listing of the species and  
 6 the designation of critical habitat.” (Id. at 10, 44.)  
 7 Therefore, this analysis clearly considers the co-extensive  
 8 costs.<sup>17</sup>

9 Relatedly, Home Builders argue that the FWS’s exclusion  
 10 of twenty-three census tracts was erroneous because the FWS did  
 11 not explain the basis for its decision to exclude only twenty-  
 12 three of 158 tracts, and because the FWS failed to consider the  
 13 relative costs of the negative economic impacts, based on the  
 14 socioeconomic profile of each individual tract. Significantly,  
 15 the Congressional record indicates that “[t]he consideration and

---

17       <sup>17</sup> Although the FWS expressly indicated in its analysis  
 18 that it took into account both the economic impact of listing the  
 19 species and the economic impact of the critical habitat  
 20 designation, see Admin. R. at 17022653 (Economic Impacts of  
Critical Habitat Designation for Vernal Pool Species (June 2005)  
at 7), Home Builders argue that other portions of the report  
 21 imply otherwise. In particular, Home Builders note that the  
 22 analysis makes mention of only critical habitat designation, and  
 23 not listing a species, in two separate places. See id. at  
 24 17022697 (“If such effects would not have occurred in the absence  
 25 of critical habitat (i.e., “but for” critical habitat), then they  
 26 are considered by this analysis to be an impact of the  
 27 designation.”); id. at 17022698 (“To the extent that delays  
 28 result from the designation, they are considered in the  
 analysis.”).

It does not follow from these sentences that the FWS  
 did not consider the economic impact of listing a species, and  
 the court is not persuaded that it should infer from these minor  
 omissions that the FWS has mischaracterized its analysis in a  
 more favorable light. The same reasoning also applies to Home  
 Builders’ suspicions that, despite its statements to the  
 contrary, the FWS did not consider costs associated with Sections  
 9 and 10. (See Home Builders’ Mot. for Summ. J. 34.)

1 weight given to any particular impact is completely within the  
2 Secretary's discretion." H.R. Rep. No. 95-1625, at 16-17 (1978),  
3 1978 U.S.C.C.A.N. at 9466-67.

4         The FWS took into account the co-extensive costs  
5 previously discussed, and determined that the estimated cost of  
6 the designation was \$965 million over the next 20 years, due to  
7 the "opportunity costs associated with the commitment of  
8 resources required to accomplish species and habitat  
9 conservation." Id. at 10, 47-53. Based on the weighing of these  
10 costs, the FWS excluded twenty-three census tracts from the final  
11 critical habitat designation. The FWS decided to exclude twenty-  
12 three tracts because they would result in the potential avoidance  
13 of approximately eighty percent of the potential costs of  
14 critical habitat designation, and would not result in extinction  
15 of a species. 70 Fed. Reg. 46,948-52. More specifically, the  
16 FWS determined that by excluding the 20 areas that would suffer  
17 the greatest economic loss if designated as critical habitat  
18 (alternatively, twenty-five percent of the critical habitat), it  
19 could avoid approximately 80 percent of the total costs. 70 Fed.  
20 Reg. at 37740. Thus, the FWS rationally excluded the twenty  
21 tracts projected to have the most detrimental economic impact.  
22 This decision clearly involved weighing the benefits and costs of  
23 exclusion, and this is the type of decision to which this court  
24 must defer.

25         The FWS also excluded three additional tracts: a tract  
26 in Merced county associated with the construction of the  
27 University of California at Merced that would have suffered a \$10  
28 million impact, a tract in Tehama county that would suffer a \$6

1 million impact because of an ongoing transportation project, and  
 2 a tract in Placer county adjacent to another excluded tract  
 3 because a development plan extending over both tracts would  
 4 result in a significant portion of the growth projected to occur  
 5 in the area. 70 Fed. Reg. 46,948-52.<sup>18</sup>

6           Although the FWS did provide a logical reason for the  
 7 exclusion of the twenty most-impacted tracts, the explanation  
 8 provided for two of the three additional tracts that were  
 9 excluded is inadequate. In its final rule, issued on August 11,  
 10 2005, the FWS noted as follows:

11           As we finalized the economic analysis, we  
 12 identified high costs associated with the  
 13 critical habitat designation to public  
 14 projects in Tehama and Merced County. These  
 15 public projects were the development of the  
 16 UC Merced Campus and the widening of Highway  
 17 99 in Tehama County. The final economic  
 18 analysis indicates additional costs in census  
 19 tracts in which these projects were located  
 20 were \$10,000,000 for UC Merced and \$6,093,965  
 21 for Highway 99. On the basis of the  
significance of these costs, we determined that  
 these two census tracts also should be excluded.  
 In addition, information received during the  
 comment period indicated that the Placer  
 Vineyards Specific Plan was located in two  
 census tracts in Placer County, one of which  
 was identified in the Draft Economic Analysis  
 as being in one of the 20 highest cost areas,  
 and one of which was not. As a result,

---

22           <sup>18</sup> The court notes that this choice did take into  
 23 consideration, to some degree, the relative harm that the  
 24 individual tracts would suffer based on their socioeconomic  
 25 profiles. Among the twenty-three census tracts ultimately  
 26 excluded are eleven of the twelve counties that were projected to  
 27 suffer the highest impact relative to aggregate household income.  
 28 70 Fed. Reg. at 46,949-50. Moreover, to the extent Home  
 Builders' argument that the agency should have considered the  
 relative impact of the economic costs is a disagreement with the  
 methodology used by FWS, "[m]ere disagreement with an agency's  
 policies, methodologies, and conclusions does not render the  
 decision arbitrary and capricious." Sierra Club v. Dombeck, 161  
 F. Supp. 2d 1052, 1070-71 (D. Ariz. 2001).

1 impacts for the two affected census tracts were  
2 aggregated in the final analysis, which  
3 significantly increased the costs in the second  
census tract. For this reason, it too, is  
being excluded from the final critical habitat  
designation.

4 70 Fed. Reg. 46,950.

5 Thus, as to the University of California at Merced and  
6 Tehama county tracts, the FWS merely highlighted the monetary  
7 benefit to excluding these tracts, and provided no additional  
8 explanation. There is no indication that these two tracts are  
9 among the twenty-two most impacted tracts. The FWS simply  
10 concludes that the high cost of inclusion justifies exclusion,  
11 without making a relative comparison amongst all tracts. This  
12 appears to be inconsistent with the rest of the logic employed by  
13 the FWS in its exclusion analysis. Thus, the two tracts relating  
14 to public works projects that were excluded as the FWS "finalized  
15 the economic analysis" appear to have been excluded arbitrarily.  
16 "The agency is obligated to 'articulate[ ] a rational connection  
17 between the facts found and the choices made.'" Pac. Coast Fed'n  
18 of Fishermen's Assocs. v. U.S. Bureau of Reclamation, 426 F.3d  
19 1082, 1091 (9th Cir. 2005) (quoting NRDC v. Dep't of Interior,  
20 113 F.3d 1121, 1126 (9th Cir. 1997)). Because the FWS failed to  
21 do so adequately with respect to these two tracts, the court  
22 concludes that their exclusion should be set aside.

23 However, the FWS did articulate a reason for excluding  
24 an additional tract in Placer county because of a development  
25 plan that encompassed that tract and would result in a  
26 significant portion of growth in the area. The FWS's exclusion  
27 of the twenty most-impacted tracts depended in part upon a  
28

1 development project that extended past one of those twenty tracts  
2 and into another tract that was not excluded. The FWS noted that  
3 “[s]ince a single development accounts for a significant fraction  
4 of growth in this area, segregating impacts by Census Tract may  
5 be artificial. Thus, impacts for tracts 06061020902 and  
6 06061021301 are aggregated in the final analysis.” 70 Fed. Reg.  
7 at 46,931. The FWS logically excluded this tract in order to  
8 maintain the remainder of the exclusions, and the court cannot  
9 conclude that this additional exclusion was arbitrary and  
10 capricious.

11 f. NEPA Violation

12 \_\_\_\_\_ Home Builders and the City of Suisun contend that the  
13 FWS violated the National Environmental Policy Act (“NEPA”), 42  
14 U.S.C. §§ 4321–4370, by failing to prepare an Environmental  
15 Impact Statement or an Environmental Assessment for its critical  
16 habitat designation. NEPA is “our basic national charter for  
17 protection of the environment. . . . [I]t establishes policy,  
18 sets goals . . . and provides means for carrying out the policy.”  
19 40 C.F.R. § 1500.1(a). NEPA requires that an Environmental  
20 Impact Statement be prepared for all “major Federal actions  
21 significantly affecting the quality of the human environment.”  
22 Id. (quoting 42 U.S.C. § 4332(C)). However, the Federal  
23 Defendants point out, and plaintiffs Home Builders concede (Pls.’  
24 Home Builders’ Mot. for Summ. J. 42–43),<sup>19</sup> that there is binding  
25 Ninth Circuit authority that precludes a challenge under NEPA for  
26

27 <sup>19</sup> Plaintiffs Home Builders have made this argument in  
28 order to preserve their right to challenge Douglas County on  
appeal.

1 a critical habitat designation made pursuant to the ESA. In  
2 Douglas County v. Babbitt, the Ninth Circuit found that

3 NEPA does not apply to the Secretary's decision  
4 to designate a habitat for an endangered or  
5 threatened species under the ESA because (1)  
6 Congress intended that the ESA critical habitat  
7 procedures displace the NEPA requirements,  
8 (2) NEPA does not apply to actions that do  
9 not change the physical environment, and  
10 (3) to apply NEPA to the ESA would further  
11 the purposes of neither statute.

12 48 F.3d 1495, 1507-08 (9th Cir. 1995). Accordingly, plaintiffs  
13 Home Builders' arguments that the FWS should have complied with  
14 the requirements of NEPA fail as a matter of law.

15 4. Environmental Groups' Motion for Summary Judgment

16 The Environmental Groups argue that the FWS's cost-  
17 benefit analysis was flawed because the agency improperly weighed  
18 excessive economic costs against inadequately-determined  
19 benefits, and improperly made non-economic exclusions to the  
20 Carrizo Plain National Monument, National Wildlife Refuges, lands  
21 subject to Habitat Conservation Plans, and lands subject to other  
22 management plans.

23 a. Data Regarding Economic Benefits

24 The Environmental Groups make several arguments  
25 regarding the arbitrariness of the FWS's cost and benefit  
26 calculations with regard to critical habitat designation.  
27 Pursuant to § 4(b)(2) of the ESA, the FWS has a mandatory duty to  
28 consider the economic and other impacts of a critical habitat  
designation using the "best scientific data available." 16  
U.S.C. § 1533(b)(2). There are no express provisions in the ESA  
regarding what "economic impact" means, and nothing is mentioned  
about "economic benefits." See 16 U.S.C. § 1533. This court has

1 previously explained that "it stands to reason that in order to  
 2 consider the economic impact, defendants must consider both the  
 3 positive and negative impact." Butte Environ., No. 04-0096, at  
 4 12. The court also indicated that it was unaware of any  
 5 authority that explains how to consider economic impact or that  
 6 specifically requires that the economic benefits of designation  
 7 be quantified. Id.

8           The FWS concluded that expressing benefits in economic  
 9 terms was prohibitively difficult, noting that the benefits of  
 10 designation "reflect broader social values, which are not the  
 11 same as economic impacts." (Admin. R. Vol. 2 at 17021468.) The  
 12 FWS therefore determined that "the benefits of critical habitat  
 13 designation are best expressed in biological terms." (Admin. R.  
 14 05008574; 17022691.) The FWS further explained this conclusion  
 15 in their August, 2003 Final Rule, in which they indicated that  
 16 "it is not feasible to fully describe and accurately quantify the  
 17 benefits of this designation in the context of this economic  
 18 analysis," and additionally that "no studies have addressed the  
 19 non-use values associated with endangered vernal pool species.  
 20 Thus, it is not possible to develop a monetary measure of this  
 21 category of benefit." (Id. Vol. I at 05008400.)<sup>20</sup> The FWS also  
 22 noted that, "[s]ufficient information does not exist to allow for  
 23 quantification of the secondary benefits of habitat protection .  
 24 . . ." (Id. at 05008405.)

---

25  
 26           <sup>20</sup> The Environmental Groups cite this draft economic  
 27 impact analysis as an example of an attempt to quantify benefits.  
 28 As demonstrated by the parts of the draft report quoted in the  
 text, it is not clear that the attempt to quantify benefits was  
 successful.

1           The Environmental Groups argue to the contrary that  
2 there was available data regarding the quantification of  
3 benefits, and that the FWS ignored or even buried such data. One  
4 example they provide is the proposed methodologies that  
5 economists submitted that could be used to quantify benefits.  
6 Thus, the Environmental Groups would have the FWS conduct an  
7 independent study into the quantification of benefits. Notably,  
8 however, “[t]he ‘best available data’ requirement makes it clear  
9 that the Secretary has no obligation to conduct independent  
10 studies.” Sw. Ctr., 215 F.3d at 60-61 (reversing and remanding a  
11 district court’s determination requiring the FWS to generate  
12 better data by conducting a species population count).  
13 Significantly, other than the benefits provided by mitigation  
14 lands, the Environmental Groups have not identified any specific  
15 type of benefit to be measured. They additionally cite the  
16 review of CRA’s analysis by a leading academic in the field of  
17 urban economics, Professor John M. Quigley at the University of  
18 California at Berkeley, who stated that “[n]owhere in the  
19 analytical paradigm for this work by CRA is there reference to  
20 the benefits of habitat protection.” (Admin. R. Vol. 2 (Doc.  
21 631).) Professor Quigley additionally acknowledged that such  
22 benefits are difficult to measure, but did not indicate how to  
23 measure them. Id. Professor Quigley further indicated that he  
24 found the analysis more generally to be “an impressive piece of  
25 work,” especially “[g]iven the inherent limitations in theory and  
26 data, and the difficulties of translating these regulations into  
27 specific changes in economic outcomes over space.” (Id. (Doc.  
28 630).) It may well be that scientific data regarding other types

1 of habitats would allow for the consideration of the economic  
2 benefits of a critical habitat designation. In fact, advances in  
3 scientific knowledge about vernal pool habitats may make it  
4 possible to quantify the economic benefits related to  
5 preservation of these habitats at some point in the future.  
6 Nevertheless, from the evidence before it, the court concludes  
7 that the FWS's determination that benefits would not be measured  
8 in terms of their strict economic value appears to be reasonable,  
9 and does not invalidate their evaluation of economic impacts.<sup>21</sup>

10 The Environmental Groups further argue that, in its  
11 estimate of the costs of critical habitat designation, the FWS  
12 improperly included the economic costs of multiple conservation  
13 measures (referred to as a "co-extensive analysis") applicable to  
14 the fifteen vernal pool species, rather than just the costs of  
15 the critical habitat designation. As previously mentioned, the  
16 ESA does not dictate how the FWS should conduct its economic  
17 impact analysis. See 16 U.S.C. § 1533(b)(2). In deciding to  
18 conduct its co-extensive analysis, the FWS relied on the Tenth  
19  
20  
21

---

22       <sup>21</sup> The Environmental Groups also cite extra-record  
23 evidence regarding a talk on June 8, 2006, by the author of the  
24 analysis prepared by CRA International. However, the court is  
25 limited to evidence in the administrative record at the time the  
26 decision was made, unless the party seeking to introduce the  
27 extra-record evidence demonstrates that it falls under an  
28 exception to the general rule. (See Motion to Strike analysis,  
supra.) The Environmental Groups have not made that argument  
here, and the court will not consider this evidence.

Additionally, the Environmental Groups' arguments  
regarding settlement discussions around the economic value of  
mitigation lands are not the proper subject of judicial notice,  
as discussed supra, and will not be considered by the court.

1 Circuit's decision in Cattle Growers, 248 F.3d at 1285.<sup>22</sup>

2           The Environmental Groups argue that the FWS wrongly  
 3 relied upon Cattle Growers, which they contend was a hard case  
 4 making bad law, and failed to take adequate account of a relevant  
 5 Ninth Circuit decision, Gifford Pinchot, 378 F.3d at 1063.<sup>23</sup> In  
 6 Gifford Pinchot, the Ninth Circuit rejected FWS's regulatory  
 7 definition of "destruction or adverse modification" for lowering  
 8 the standard for critical habitat designation, which requires  
 9 consideration of promoting recovery of the species rather than  
 10 simply ensuring its survival. The concern in Gifford Pinchot was  
 11 that the FWS's definition with respect to critical habitats  
 12 effectively "read out" of the statute the limitations in place  
 13 with respect to listing a species. 378 F.3d at 1069-70.

14           In Gifford Pinchot, the Ninth Circuit concluded that  
 15 the FWS had erred by promulgating a regulation defining  
 16 "destruction or adverse modification" as "a direct or indirect  
 17 alteration that appreciably diminishes the value of critical  
 18 habitat for both the survival and recovery of a listed species."  
 19 Id. (citing 50 C.F.R. § 402.02). The court noted that this  
 20 regulation allowed changes to the critical habitat designation in  
 21 a manner that effectively ignores the recovery requirement,

---

22           <sup>22</sup> The court's prior analysis with regard to Home  
 23 Builders' arguments that the FWS did not rely on Cattle Growers  
 24 is also instructive here. To the extent that the FWS relied on  
Cattle Growers and neglected to consider the effects of the  
 25 critical habitat designation on species' recovery, pursuant to  
Gifford Pinchot, the critical habitat designation is not  
 26 consistent with applicable Ninth Circuit precedent.

27           <sup>23</sup> See Cape Hatteras Access Pres. Alliance, 344 F. Supp.  
 28 2d 108, 130 (D.D.C. 2004) (noting that Cattle Growers was "an  
 instance of a hard case making bad law," and examining the  
 inconsistency between Cattle Growers and Gifford Pinchot).

1 because a modification that affects a species' survival does  
2 greater damage to the species than a modification that would  
3 merely affect the species' ability to recover. "Because it is  
4 logical and inevitable that a species requires more critical  
5 habitat for recovery than is necessary for species survival, the  
6 regulation's singular focus becomes 'survival.'" Gifford  
7 Pinchot, 378 F.3d at 1069. However, the "the purpose of  
8 establishing 'critical habitat' is for the government to carve  
9 out territory that is not only necessary for the species'  
10 survival but also essential for the species' recovery." Id. at  
11 1070. Accordingly, the court held that this regulation was  
12 impermissible. Id. at 1071.

13 Thus, the biological opinions at issue in Gifford  
14 Pinchot evaluated only whether the proposed modifications to  
15 critical habitat would impede the more dire of the two goals--  
16 survival of the species--and ignored whether the proposed  
17 modifications would affect the goal of fostering recovery of the  
18 species. Id. at 1070-71. Additionally, the Ninth Circuit noted  
19 that an agency is afforded a presumption of regularity, meaning  
20 that it is presumed to have followed its own regulations, absent  
21 evidence to the contrary. Id. at 1072 (citing Citizens to  
22 Preserve Overton Park v. Volpe, 401 U.S. 402, 415 (1971)  
23 (overruled on other grounds by Califano v. Sanders, 430 U.S. 99,  
24 105 (1977))). Because there was no evidence in the record to  
25 rebut the presumption that the FWS had followed its flawed  
26 regulation, the Ninth Circuit invalidated the biological opinions

27  
28

1 issued by the agency in Gifford Pinchot. Id. at 107.<sup>24</sup>

2           The Environmental Groups argue that the FWS conducted  
 3 an improper economic analysis contrary to Gifford Pinchot because  
 4 the FWS conducted a coextensive analysis that measured the impact  
 5 of every conservation measure applicable to the fifteen vernal  
 6 pool species and because the FWS regulation invalidated by the  
 7 Ninth Circuit is still in effect. The FWS has not expressly  
 8 withdrawn this invalidated regulation, and the Ninth Circuit also  
 9 explained in Gifford Pinchot that it "must [be] presume[d],  
 10 unless rebutted by evidence in the record, that the FWS followed  
 11 its [own regulation]."

12           It is in this legal framework that the court turns to  
 13 the evidence in the record to see whether the FWS considered the  
 14 recovery benefits that accompany critical habitat designation.  
 15 In its final rule, the FWS explained as follows:

16           While we have not yet proposed a new  
 17 definition for public review and comment,  
 18 compliance with the Court's direction [in  
Gifford Pinchot] may result in additional  
 costs associated with the designation of

---

19           <sup>24</sup> A similar conclusion was reached by the D.C. Circuit  
 20 in a careful opinion that parses both Gifford Pinchot and Cattle  
Growers as well as the FWS regulation invalidated in Gifford  
Pinchot. The D.C. Circuit explained that,

22           Under the Service's regulation, by virtue  
 23 of the 'and's, both listing and designation  
 24 result in consultations only when a species's  
 25 survival is at stake, which makes it impossible  
 26 for an action to bring about a consultation if  
 27 only recovery is at stake. The definition of  
 the adverse modification standard, then, fails  
 to account for the ESA's command that critical  
 habitat be designated for 'conservation,' and  
 not merely survival.

28           Cape Hatteras Access Preservation Alliance v. U.S. Dept. of  
 Interior, 344 F. Supp. 2d 108, 129 (D.D.C. 2004).

critical habitat (depending upon the outcome of the rulemaking). In light of the uncertainty concerning the regulatory definition of adverse modification, our current methodological approach to conducting economic analyses of our critical habitat designations is to consider all conservation-related costs. This approach would include costs related to sections 4, 7, 9, and 10 of the [ESA], and should encompass costs that would be considered and evaluated in light of the Gifford Pinchot ruling.

Id. at 46,948. Thus, the FWS has indicated that it was not abiding by its invalidated regulation, but rather relying upon an economic analysis that included the costs of recovery, pursuant to Gifford Pinchot. The FWS also noted in its final rule that "each area designated as critical habitat may require some level of management and/or protection to address the current and future threats to each of the 15 vernal pool species to ensure that they may recover. . . ." 70 Fed. Reg. at 46,945. To that end, the FWS specified several different measures that could be undertaken to ensure recovery, including preventing invasive species from crowding out native species, restoring the hydrology of vernal pool complexes, and managing off-road vehicle use. Id. The FWS further indicated that, for areas designated as critical habitat, "[p]rimary constituent elements in these areas would be protected from destruction or adverse modification by federal actions using a conservation standard based on the Ninth Circuit's decision in Gifford Pinchot. This requirement would be in addition to the requirement that proposed Federal actions avoid likely jeopardy to the species continued existence." Id. at 46,950.

Additionally, the FWS explained that "[c]ritical habitat is being

1 designated for all 11 [plant] species in other areas that will be  
2 accorded the protection from adverse modification by federal  
3 actions using the conservation standard based on the Ninth  
4 Circuit decision in Gifford Pinchot." Id.

5 However, these isolated instances discussing the  
6 recovery standard, and assurances by the FWS that Gifford Pinchot  
7 has been applied to the reasoning in the critical habitat  
8 designation, are contradicted by evidence in the record.

9 Significantly, the penultimate version of the rule, issued on  
10 March 8, 2005, does not mention either recovery benefits or the  
11 ruling in Gifford Pinchot regarding the benefits or critical  
12 habitat. (Admin. R. Vol II: 15018098-102.) In early August,  
13 shortly before the final rule was released, the Environmental  
14 Groups point out that there were emails exchanged between staff  
15 members at the FWS, asking whether there was "Gifford-Pinchot  
16 language in [the final rule]?" (Admin. R. Vol. 2 (Docs. 186,  
17 194, 204).) One staffer emailed that the final rule would not be  
18 approved by some members of the agency "unless we demonstrate  
19 that a Gifford Pinchot analysis was completed for this rule, per  
20 Mike it does not have to be in the rule, but must be in the Adm  
21 [sic] Record." (Id. (Doc. 194).)

22 In fact, it appears that new language regarding Gifford  
23 Pinchot was scattered throughout the August, 2005, rule as a  
24 result of the eleventh-hour email exchange amongst FWS staff  
25 members. (Admin R. Vol. 2 (Doc. 204) (The last email in this  
26 series in the record indicated that the following statements  
27 would be added to the final rule: "In light of the uncertainty  
28 concerning the regulatory definition of adverse modification, our

1 current methodological approach to conducting economic analyses  
2 of our critical habitat designations is to consider all  
3 conservation-related costs. This approach would include costs  
4 related to sections 4, 7, 9, and 10 of the Act, and should  
5 encompass costs that would be considered and evaluated in light  
6 of (or in response to . . .) the Gifford Pinchot ruling.”). A  
7 careful examination of the Final Rule reveals that the FWS merely  
8 added language relating to the Ninth Circuit decision, instead of  
9 carefully considering and incorporating the Ninth Circuit’s  
10 guidance in its critical habitat designation.

11 In the text of the rule, the FWS stated that “the  
12 designation of statutory critical habitat provides little  
13 additional protection to most listed species, while consuming  
14 significant amounts of available conservation resources. . . .”  
15 70 Fed. Reg. at 46,924. The FWS also indicated its skepticism  
16 about the additional benefits provided by critical habitat  
17 designations. Id. The FWS cited an article that concluded,  
18 “because the Act can protect species with and without critical  
19 habitat designation, critical habitat designation may be  
20 redundant to the other consultation requirements of section 7.”  
21 Id. (emphasis added). Accordingly, there is insufficient  
22 evidence in the record to conclude that the FWS adequately  
23 considered the recovery benefits of a critical habitat  
24 designation in coming to the conclusions in its Final Rule.

25 The FWS’s failure to consider the recovery goal of the  
26 designation is similar to the situation in Center for Biological  
27 Diversity v. Bureau of Land Management, 422 F. Supp. 2d 1115,  
28 1122 (N.D. Cal. 2006). In that case, Judge Illston concluded

1 that, by finding "that there were no additional regulatory  
2 benefits to be gained by designating critical habitat in areas  
3 that were ultimately excluded, the Service improperly ignored the  
4 recovery goal of critical habitat." Id. Judge Illston also  
5 noted that "references to 'conservation' in the proposed and  
6 final rules cannot be squared with the reasoning in the final  
7 rule which essentially equates 'jeopardy' and 'adverse  
8 modification' determinations to conclude that the regulatory  
9 benefits of critical habitat in the excluded areas was  
10 negligible." Id. at 1146. This court is similarly unconvinced  
11 that the FWS actually considered the recovery benefits of  
12 critical habitat designation, notwithstanding the fact that it  
13 referenced Gifford Pinchot, and therefore concludes that the  
14 agency's critical habitat designation was arbitrary and  
15 capricious because it failed to comply with the applicable legal  
16 standards.

17 Finally, the Environmental Groups contend that the  
18 FWS's relative weighing of costs against benefits failed to  
19 consider the recovery and regulatory benefits to the species upon  
20 critical habitat designation. The FWS did consider many  
21 potential benefits, including certain categories of benefits that  
22 reflect broader social values. (Admin. R. Vol. 2 at 17021468.)  
23 The FWS noted, however, that explicitly considering broader  
24 social values for the species and the habitat would duplicate the  
25 codification of the societal value of protecting species by  
26 Congress in enacting the ESA. (Id.) Additionally, the FWS did  
27 discuss at length the benefits that would be derived from the  
28 exclusion of the twenty-three census tracts at issue, including

1 the fact that vernal pool species would have increased protection  
2 and landowners and the public would become educated about the  
3 conservation value of the vernal pool habitat. (Id. at 17021487-  
4 88.) The FWS also addressed the recovery benefits of designation  
5 by noting that it chose to exclude only twenty-three of the total  
6 158 census tracts it considered designating as critical habitat  
7 to "recognize[] the benefits of including areas beyond the  
8 minimum necessary to avoid extinction, despite significant  
9 economic costs." (Id. at 17021468.) Because the agency has not  
10 made an "erroneous conclusion of law" and the court cannot say  
11 that the "record contains no evidence on which it could  
12 rationally base that decision," the court cannot find that the  
13 FWS abused its discretion with regard to its consideration of  
14 benefits. Mendenhall v. Nat'l Transp. Safety Bd., 92 F.3d 871,  
15 874 (9th Cir. 1996).

16                   b. Non-Economic Exclusions

17                 The Environmental Groups contend that the FWS  
18 improperly relied upon the existence of alternative land  
19 management plans in weighing the costs and benefits of exclusion  
20 pursuant to § 4(b) (2). In deciding what land to exclude from its  
21 critical habitat designation, the FWS determined that for certain  
22 lands protected by existing management plans and practices, the  
23 benefits of inclusion are likely to be minimal and outweighed by  
24 the benefits of exclusion.

25                 For the proposition that Federal Defendants may not  
26 exclude land based on the existence of alternative land  
27 management plans, the plaintiffs cite caselaw that applies to the  
28 definition of critical habitat provided in another section of the

1   ESA. See, e.g., Ctr. for Biological Diversity v. Norton, 240 F.  
 2   Supp. 2d 1090, 1100 (D. Ariz. 2003) (applying the definition of  
 3   critical habitat in ESA § 3(5)(A)); Nat. Res. Def. Council, 113  
 4   F.3d at 1127 (same); Conservation Council for Haw. v. Babbit, 2  
 5   F. Supp. 2d 1280, 1287 (D. Haw. 1998) (same).<sup>25</sup> By contrast, the  
 6   relevant provision of the ESA here is § 4(b)(2), which permits  
 7   the FWS to conduct a discretionary analysis of its exclusions.  
 8   Thus, the Environmental Groups have not cited any authority that  
 9   would preclude the FWS from considering the existence of other  
 10   management schemes in deciding whether to exclude land from its  
 11   critical habitat designation.

12           More specifically, the Environmental Groups argue that  
 13   the Carrizo Plain National Monument was improperly excluded. The  
 14   Bureau of Land Management had a draft management plan in place  
 15   for the Carrizo Plain National Monument, which was set to become  
 16   final in June, 2006. 70 Fed. Reg. at 46,947. This plan outlines  
 17   “management for the long-term conservation and recovery of listed  
 18   plants and animals and the natural communities on which they  
 19   depend, and to improve and sustain populations of federally  
 20   listed species to meet conservation and recovery goals.” Id.  
 21   The species covered by the plan include the two species of fairy  
 22   shrimp that would have been protected by the critical habitat  
 23   designation. Id. The FWS did not merely defer to the Bureau of  
 24   Land Management’s authority; instead, it incorporated the nature  
 25   of oversight by the Bureau of Land Management into its weighing

---

27           <sup>25</sup> Pursuant to ESA § 3(5)(A), “designation of critical  
 28   habitat is necessary except when designation would not be  
 ‘prudent’ or ‘determinable.’” 16 U.S.C. § 1533(a)(3).

1 of the benefits of inclusion versus exclusion and its  
 2 determination of whether the species would become extinct absent  
 3 inclusion. Id. at 46,948. The FWS was also responding to  
 4 comments that critical habitat designation in the Carrizo Plain  
 5 National Monument would "hinder essential voluntary conservation  
 6 efforts." 70 Fed. Reg. at 46,929.

7 Additionally, the Environmental Groups contend that  
 8 this court's previous order limited the scope of the exclusions  
 9 the agency could make, and the agency improperly took action  
 10 exceeding what the court ordered. However, the court merely  
 11 required that the FWS complete a reevaluation of the land that  
 12 was excluded at the time by March 8, and did not expressly  
 13 preclude any other exclusions. Butte Env'tl. Council, No. 04-  
 14 0096, at 25. Thus, the FWS was not prevented from considering  
 15 the exclusion of Carrizo Plain National Monument based on this  
 16 court's previous holding.<sup>26</sup> Accordingly, the court finds the  
 17 FWS's exclusion of the Carrizo Plain National Monument to be  
 18 reasonable.

---

19

20       <sup>26</sup> The Environmental Groups further argue that the FWS did  
 21 not provide adequate notice of its exclusion of the Carrizo Plain  
 22 National Monument lands. "[T]he fact that a final rule varies  
 23 from a proposal, even substantially, does not automatically void  
 24 the regulations. Rather, [a court] must determine whether the  
 25 inclusion of the BMPs in the final rule was in character with the  
 26 original proposal and a logical outgrowth of the notice and  
 27 comments received." Rybacheck v. United States Environ.  
Protection Agency, 904 F.2d 1276, 1287-88 (9th Cir. 1990). Here,  
 28 the FWS had indicated in its June, 2005 Federal Register notice  
 that it was soliciting comments on whether any areas should be  
 excluded and would reconsider all previously-submitted comments.  
 70 Fed. Reg. at 37,740-41. The Bureau of Land Management had  
 requested the exclusion of Carrizo Plain National Monument lands.  
 70 Fed. Reg. at 11,145. Thus, exclusion of the National Monument  
 lands was "a logical outgrowth of the notice and comments  
 received," and therefore procedurally adequate.

1           Similarly, the FWS reasonably determined that the  
2 benefits of exclusion outweighed the benefits of inclusion for  
3 areas within national wildlife refuges and within the Coleman  
4 National Fish Hatchery complex. 70 Fed. Reg. at 11,151. The FWS  
5 also concluded that exclusion would not result in extinction of  
6 the species. Id. The FWS noted that, “[a]ll of these refuges  
7 are developing comprehensive resource management plans that will  
8 provide for protection and management of all trust resources,  
9 including federally listed species and sensitive natural  
10 habitats.” Id. Additionally, the agency explained that “[t]he  
11 comprehensive resource management plan for the Kern National  
12 Wildlife Refuge Complex has been completed and the associated  
13 biological opinion concluded that its implementation would not  
14 jeopardize the continued existence of these species.” Id.  
15 (citation omitted). For these reasons, the FWS’s decision to  
16 exclude the wildlife refuges from its critical habitat  
17 designation was not arbitrary or capricious.

18           The FWS additionally reasonably excluded areas having  
19 habitat conservation plans (“HCPs”). HCPs are developed as part  
20 of a permitting process for private lands when activities related  
21 to development will result in a taking of an endangered species.  
22 16 U.S.C. § 1538(a)(1)(B) & (G); § 1539(a)(1)(B), (2)(A) & (B).  
23 A permit is only allowed if the taking is incidental, the impacts  
24 of the taking are minimized and mitigated, the applicant funds  
25 the plan adequately, the plan will not appreciably reduce the  
26 likelihood of species’ survival and recovery, and other measures  
27 required by the agency are also met. 16 U.S.C. § 1539(a)(2)(B).  
28 In March 8, 2005, the FWS explained its exclusion of lands

1 subject to HCPs based on its determination that the benefits of  
2 exclusion outweighed the benefits of inclusion, and the species  
3 would not become extinct as a result. 70 Fed. Reg. at 11,149-51.

4       The FWS also examined each individual plan to determine  
5 how it should be weighed, and expressly noted that the Western  
6 Riverside county MSHCP would "address[] the primary conservation  
7 needs of the species by protecting the ecosystem upon which it  
8 relies . . . [and] provide for the longer term conservation of  
9 this pool and vernal fairy shrimp." Id. at 11,150. In fact, the  
10 FWS explained that, "since the entire habitat area is addressed  
11 under the HCP, preserve, and mitigation bank and not just habitat  
12 with a federal nexus, the existing management already provides  
13 more protection than can be provided by a critical habitat  
14 designation." Id. Another part of the Western Riverside MSHCP,  
15 proposed unit 34 for the critical habitat designation, is the  
16 Santa Rosa Plateau Ecological Reserve, which is "owned by The  
17 Nature Conservancy (TNC), and is cooperatively managed by TNC,  
18 the Riverside County Regional Park and Open Space District, CDFG  
19 [the California Department of Fish and Game], and the Service."  
20 Id. Federal Defendants point out that the designation of  
21 critical habitat is not only less powerful of a protection than  
22 an HCP, but also can adversely affect the partnerships with local  
23 jurisdictions and project proponents that are need to create HCPs  
24 by imposing duplicative regulatory burdens on the people  
25 involved. 70 Fed. Reg. at 11,149. Thus, as with the other non-  
26 economic exclusions, this exclusion was made in the FWS's  
27 reasonable exercise of discretion.

28       Finally, the FWS's exclusion of four areas of land

1 belonging to the Department of Defense was proper. Those areas  
2 consisted of Travis Air Force Base ("AFB"), Beale AFB, Fort  
3 Hunter Ligget, and Camp Roberts. Pursuant to 16 U.S.C.A. § 1533,  
4 the FWS provided a determination in writing that these plans  
5 provide a benefit to some of the fifteen vernal pool species for  
6 Travis AFB and Beale AFB. See 70 Fed. Reg. at 11,153 ("Travis  
7 AFB has a Service-approved INRMP in place that provides a benefit  
8 for vernal pool fairy shrimp. . . ."); id. ("Beale AFB has a  
9 Service approved INRMP in place that provides a benefit for the  
10 vernal pool fairy shrimp and the vernal pool tadpole shrimp.").  
11 Additionally, both air force bases are now defunct.

12 Further, although the ESA provides that Department of  
13 Defense land may be excluded pursuant to 16 U.S.C.A. § 1533, Fort  
14 Hunter Liggett and Camp Roberts were excluded pursuant to ESA §  
15 4(b) (2); in other words, they were excluded under the economic  
16 impact analysis previously discussed. See, e.g., 70 Fed. Reg. at  
17 11,145 ("The two Army National Guard Reserves Bases [Camp Roberts  
18 and Fort Hunter Liggett] were excluded through § 4(b) (2) of the  
19 Act, since the benefits of excluding outweigh the benefits of  
20 including those vernal pool areas within the designation."); 68  
21 Fed. Reg. at 46,750-52 (weighing the benefits of exclusion  
22 against the benefits of inclusion into the critical habitat  
23 designation for Camp Roberts and Fort Hunter Liggett); id. at  
24 46,700 ("We recognize that designation of critical habitat has  
25 the potential to modify military training operations and the use  
26 or development of base facilities. We have determined that the  
27 benefits of excluding these facilities outweigh the benefits of  
28 including them. Subsequently, Camp Roberts and Fort Hunter

1 Liggett have been excluded from this final designation of  
2 critical habitat.”).

3 III. Conclusion

4 Home Builders’ motion for summary judgment must be  
5 granted with respect to the exclusions of the two tracts with  
6 ongoing public projects involving the development of the UC  
7 Merced campus and the widening of Highway 99 in Tehama County.  
8 In all other respects, the motions of Home Builders, Tsakopoulos  
9 Investments, and the City of Suisun for summary judgment are  
10 denied.

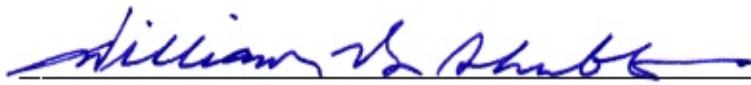

11 The Environmental Groups’ motion for summary judgment  
12 is granted on the limited ground that the FWS failed to consider  
13 the recovery standard under the ESA, pursuant to the Ninth  
14 Circuit’s guidance in Gifford Pinchot Task Force v. U.S. Fish &  
15 Wildlife Service, 378 F.3d 1059, 1069 (9th Cir. 2004). In all  
16 other respects, the Environmental Groups’ motion for summary  
17 judgment is denied, and the Federal Defendants’ motion for  
18 summary judgment is granted.

19 The FWS’s exclusions of critical habitat pursuant to §  
20 4(b)(2) of the ESA, 16 U.S.C. § 1533(b)(2), in its Final Critical  
21 Habitat Rule of August 2005, Final Designation of Critical  
22 Habitat for Four Vernal Pool Crustaceans and Eleven Vernal Pool  
23 Plants in California and Southern Origin, and accompanying  
24 economic analysis, must be remanded to the FWS for further action  
25 and consideration consistent with all applicable laws and with  
26 the reasoning in this order.

27 IT IS THEREFORE ORDERED that this matter be, and the  
28 same hereby is, REMANDED to the FWS for further action and

1 consideration consistent with this order. The FWS shall submit a  
2 new final critical habitat rule to the Federal Register for  
3 publication therein within 120 days of the date of this order.<sup>27</sup>

4 DATED: November 1, 2006

24       <sup>27</sup> The court previously allowed six months for the final  
25 designation of critical habitat, and because the necessary  
26 changes here are simply an amendment to a prior final  
27 designation, the court concludes that a 120 day deadline is more  
months for the FWS to complete a final critical habitat  
designation and noting that many courts have allowed only 120  
days for the same action).
